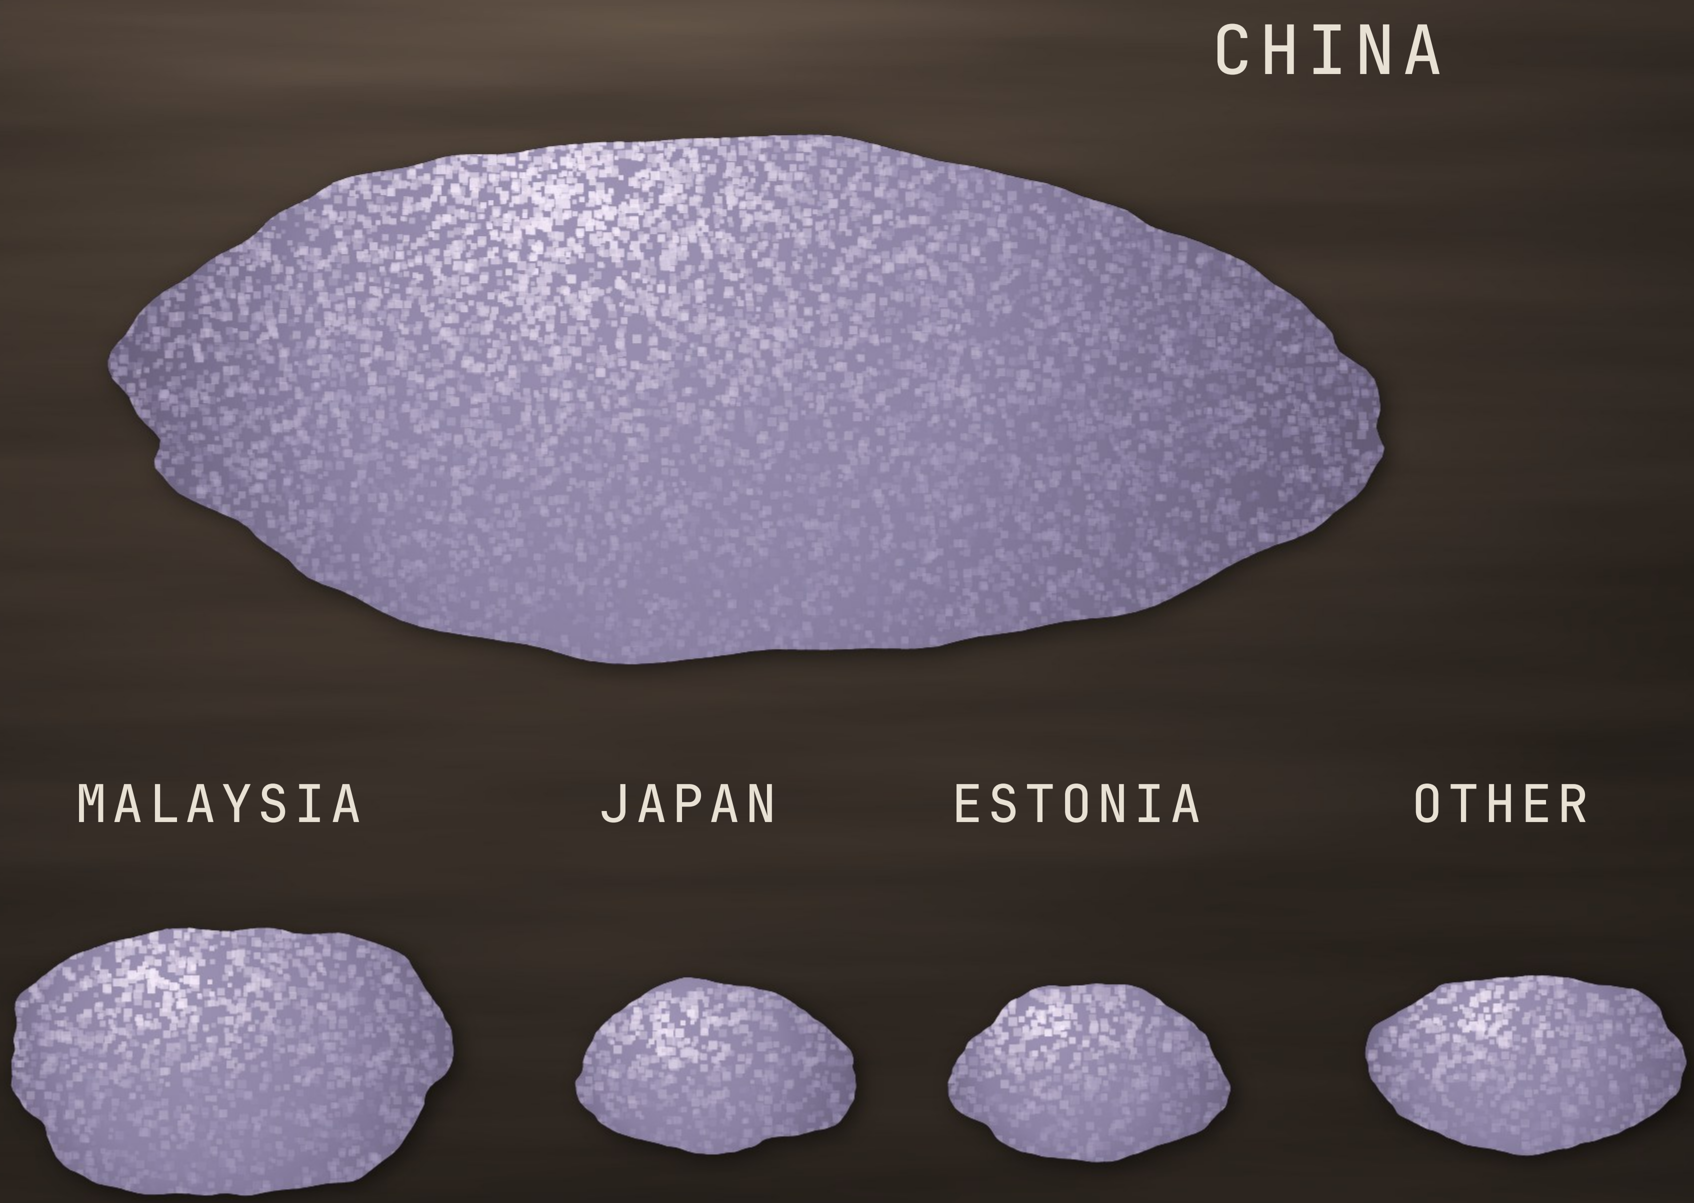
71 percent from one country.

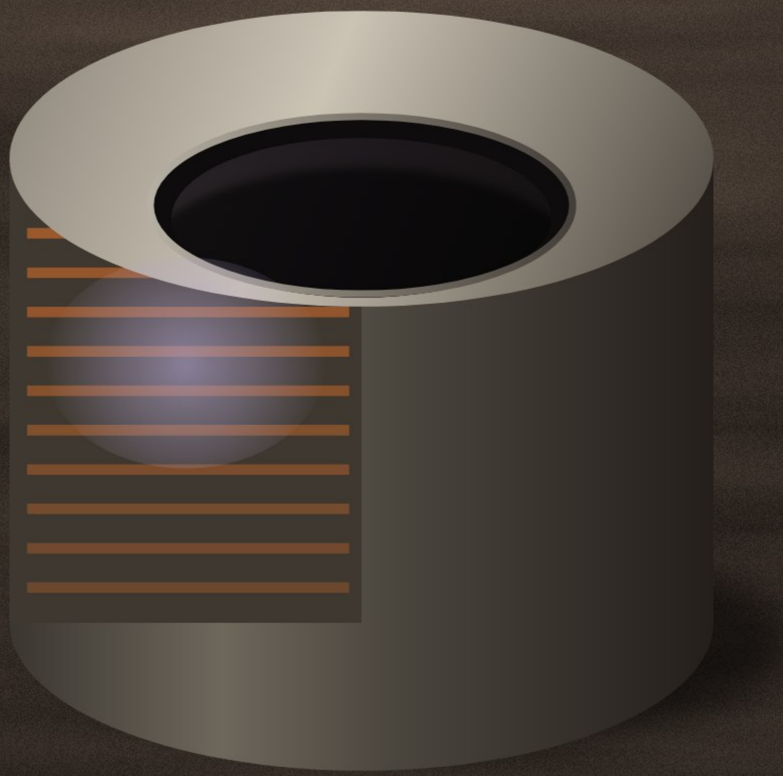
A federal survey lists where the United States gets the rare earth compounds and metals it imports. Five sources, and one of them is most of it.



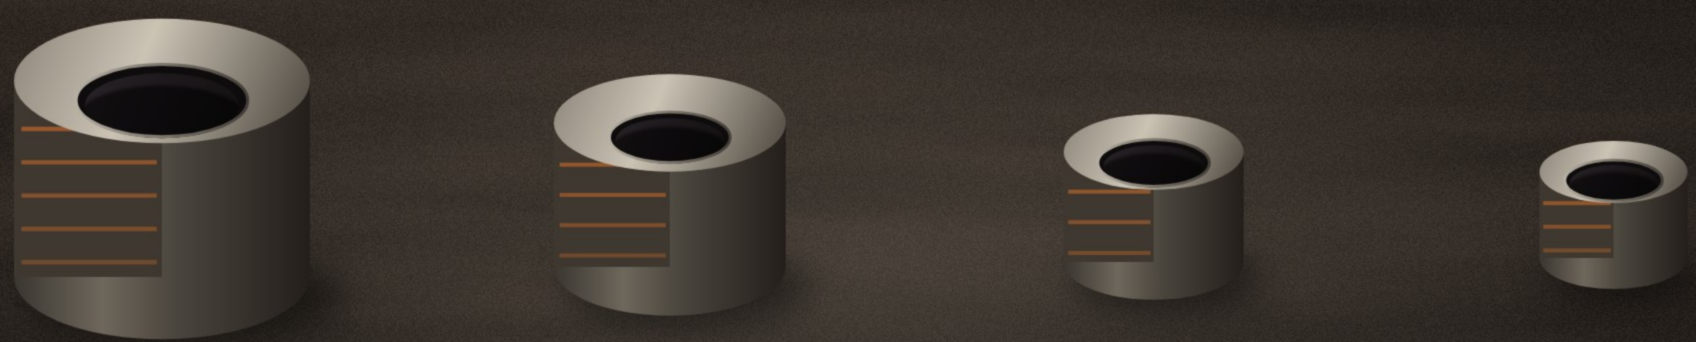
It is already in your house.

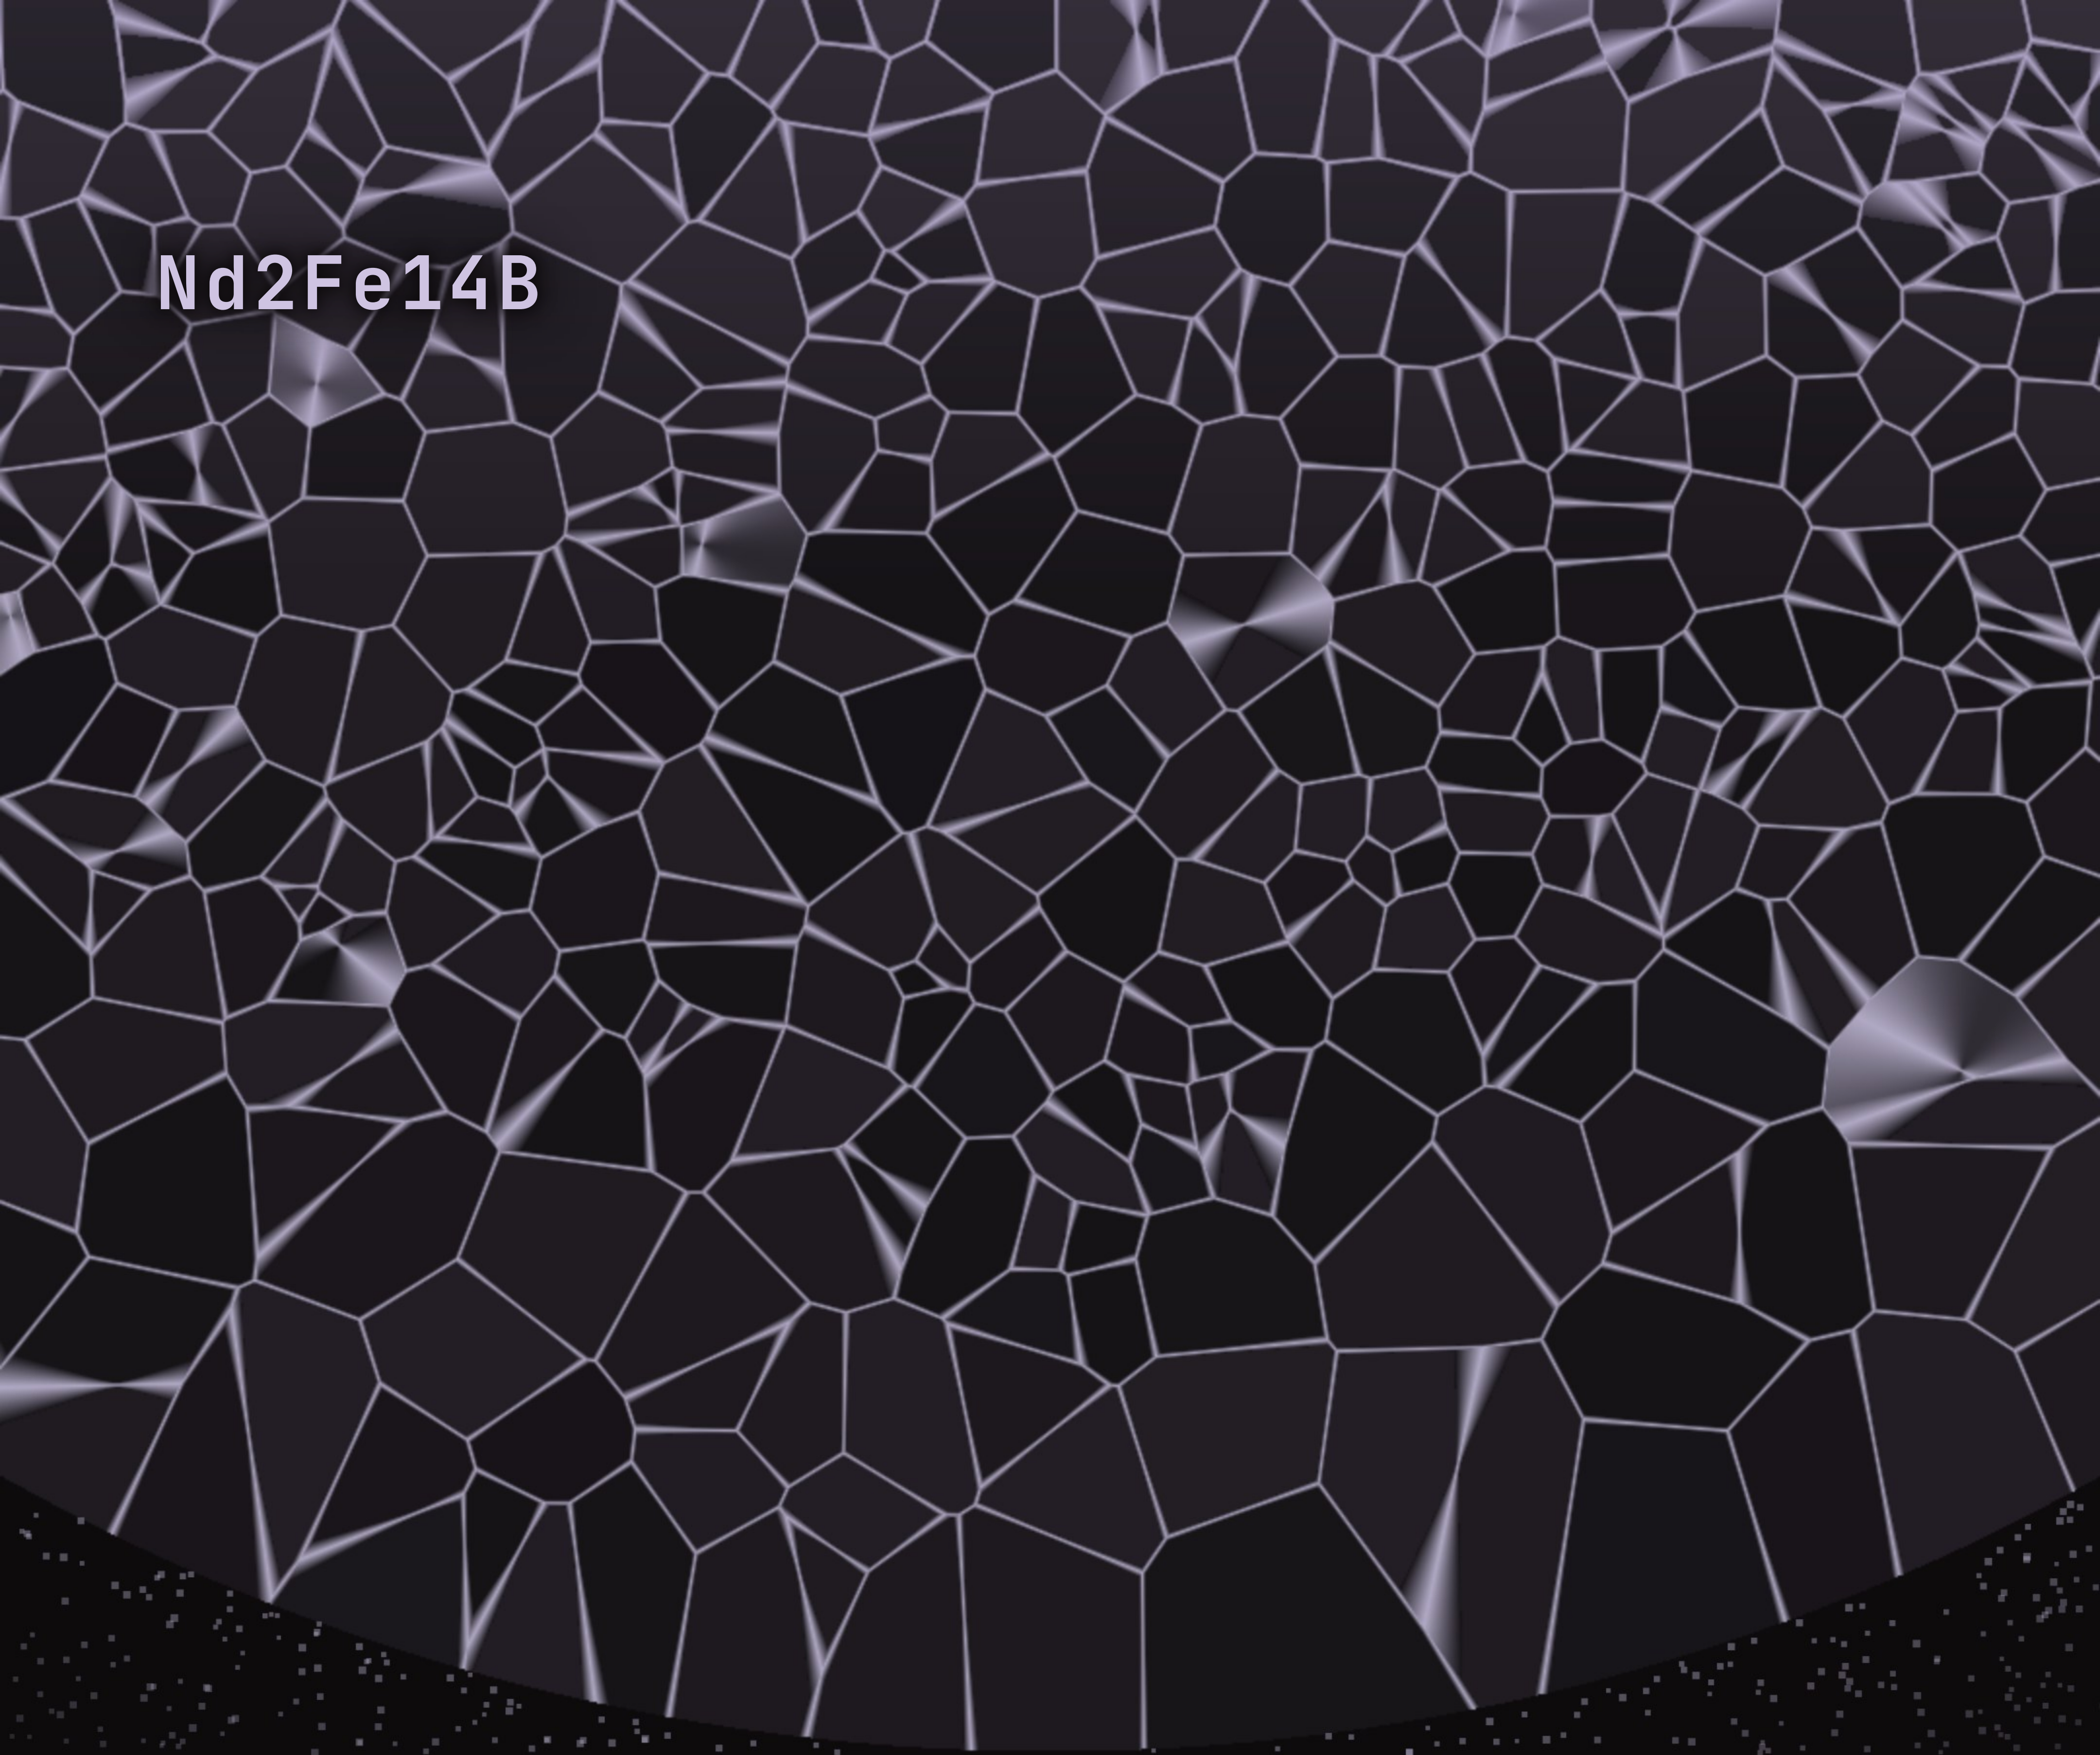
"Magnets are everywhere, from air conditioning systems to all our electronic devices"

AIR CONDITIONING SYSTEMS



ELECTRONIC DEVICES





Found once.

"The discovery of Nd2Fe14B, with its complex structural chemistry and extraordinary properties, suggests that other complex magnetic materials"

The block to beat.

The Houston led team aims to surpass the properties of neodymium iron boron, the current industry-standard material for high-performance permanent magnets. The Department of Energy's Advanced Research Projects Agency-Energy set it against any known material.

SATURATION MAGNETIZATION OR MAXIMUM ENERGY PRODUCT

"The estimated leading domestic end use of rare earths was catalysts, whereas the estimated leading global use was magnets."

IMPORT SOURCES

CHINA	71%
MALAYSIA	13%
JAPAN	5%
ESTONIA	5%
OTHER	6%

U.S. GEOLOGICAL SURVEY, MINERAL COMMODITY SUMMARIES 2026, RARE EARTHS

The leading global use is magnets.

GAMBIT

Guided AI for Magnetic Boride/Carbide Intermetallic Technologies (GAMBIT)

The name states a chemistry and not a supply chain.

Magnetic Acceleration Generating New Innovations and Tactical Outcomes (MAGNITO)
DE-FOA-0003590

Picked for testing.

"Our goal is to use AI to find entirely new materials while simultaneously balancing these supply constraint concerns."

One award, two figures.

$2.88 million
UNIVERSITY OF HOUSTON

Neither page reconciles them and neither does this.

$2.9 million
RICE UNIVERSITY

"If you improve the quality of these magnets, that translates into an efficiency gain everywhere"
