

12 of 120.

The UT System's health care AI laboratory funded 12 pilot projects out of 120 submissions. The awards total more than \$3.6 million. Each gold window stands for one funded pilot.

One AI assistant, seven UT hospital sites

At UT San Antonio, a pilot deploys an assistant called Leah for emergency triage and transfer decisions. The page says it was trained on more than 400,000 trauma cases.

Six tools inside Epic

At UT Dell Medical School a pilot implements six AI tools built into Epic. They automate lab result messaging and generate imaging summaries for patients.

AUTOMATE LAB RESULT MESSAGING

PATIENT-FACING IMAGING SUMMARIES

It will read the notes.

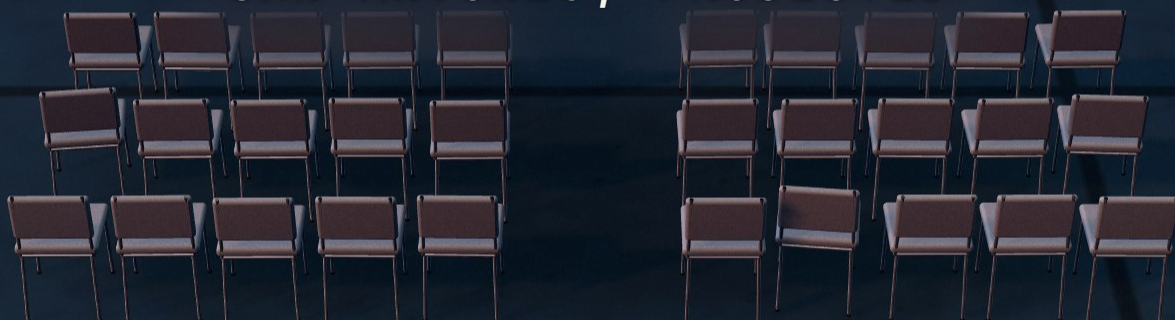

A Dell Medical School pilot will use large language models across more than 7 million patient records. It will look for signs of suicide risk.

One entry states what it saved.

The page credits the no-show project with more than 6,500 appointments saved at UTHealth Houston and cites no audit behind it. It projects at least 15,000 a year at UT Health San Antonio.

SAN ANTONIO, PROJECTED

HOUSTON, AS THE PAGE STATES IT

ONE SEAT = 500 APPOINTMENTS

Eleven entries, no saved count.

Only the no-show entry states what it already saved, and the page cites no audit behind it. The other eleven describe the work, not what it saved.

UTMB is deploying referral triage.

In Galveston the tool reads the health record, assigns an urgency score and routes patients to a level of care.

Two more expand earlier platforms.

A trial prescreening platform was validated on nearly 40,000 patients at UT Southwestern. An AI grading platform for medical school simulation exams has run for more than three years.

Austin, October 7th and 8th

UT REAL Health AI holds its symposium there. Its page carries
a link to register.
