Anyone can ride one to the airport now

On October 14th Waymo opened its San Antonio robotaxis to anyone with the app, San Antonio International Airport included. The federal record of its flood recall still lists the remedy as under development. Drawn to illustrate.

In February, it came by invitation

Waymo took its first public riders in San Antonio on February 24th, inviting them from the tens of thousands across four cities who had the app. Texas Public Radio put that first service area at 60 square miles. Drawn to illustrate.

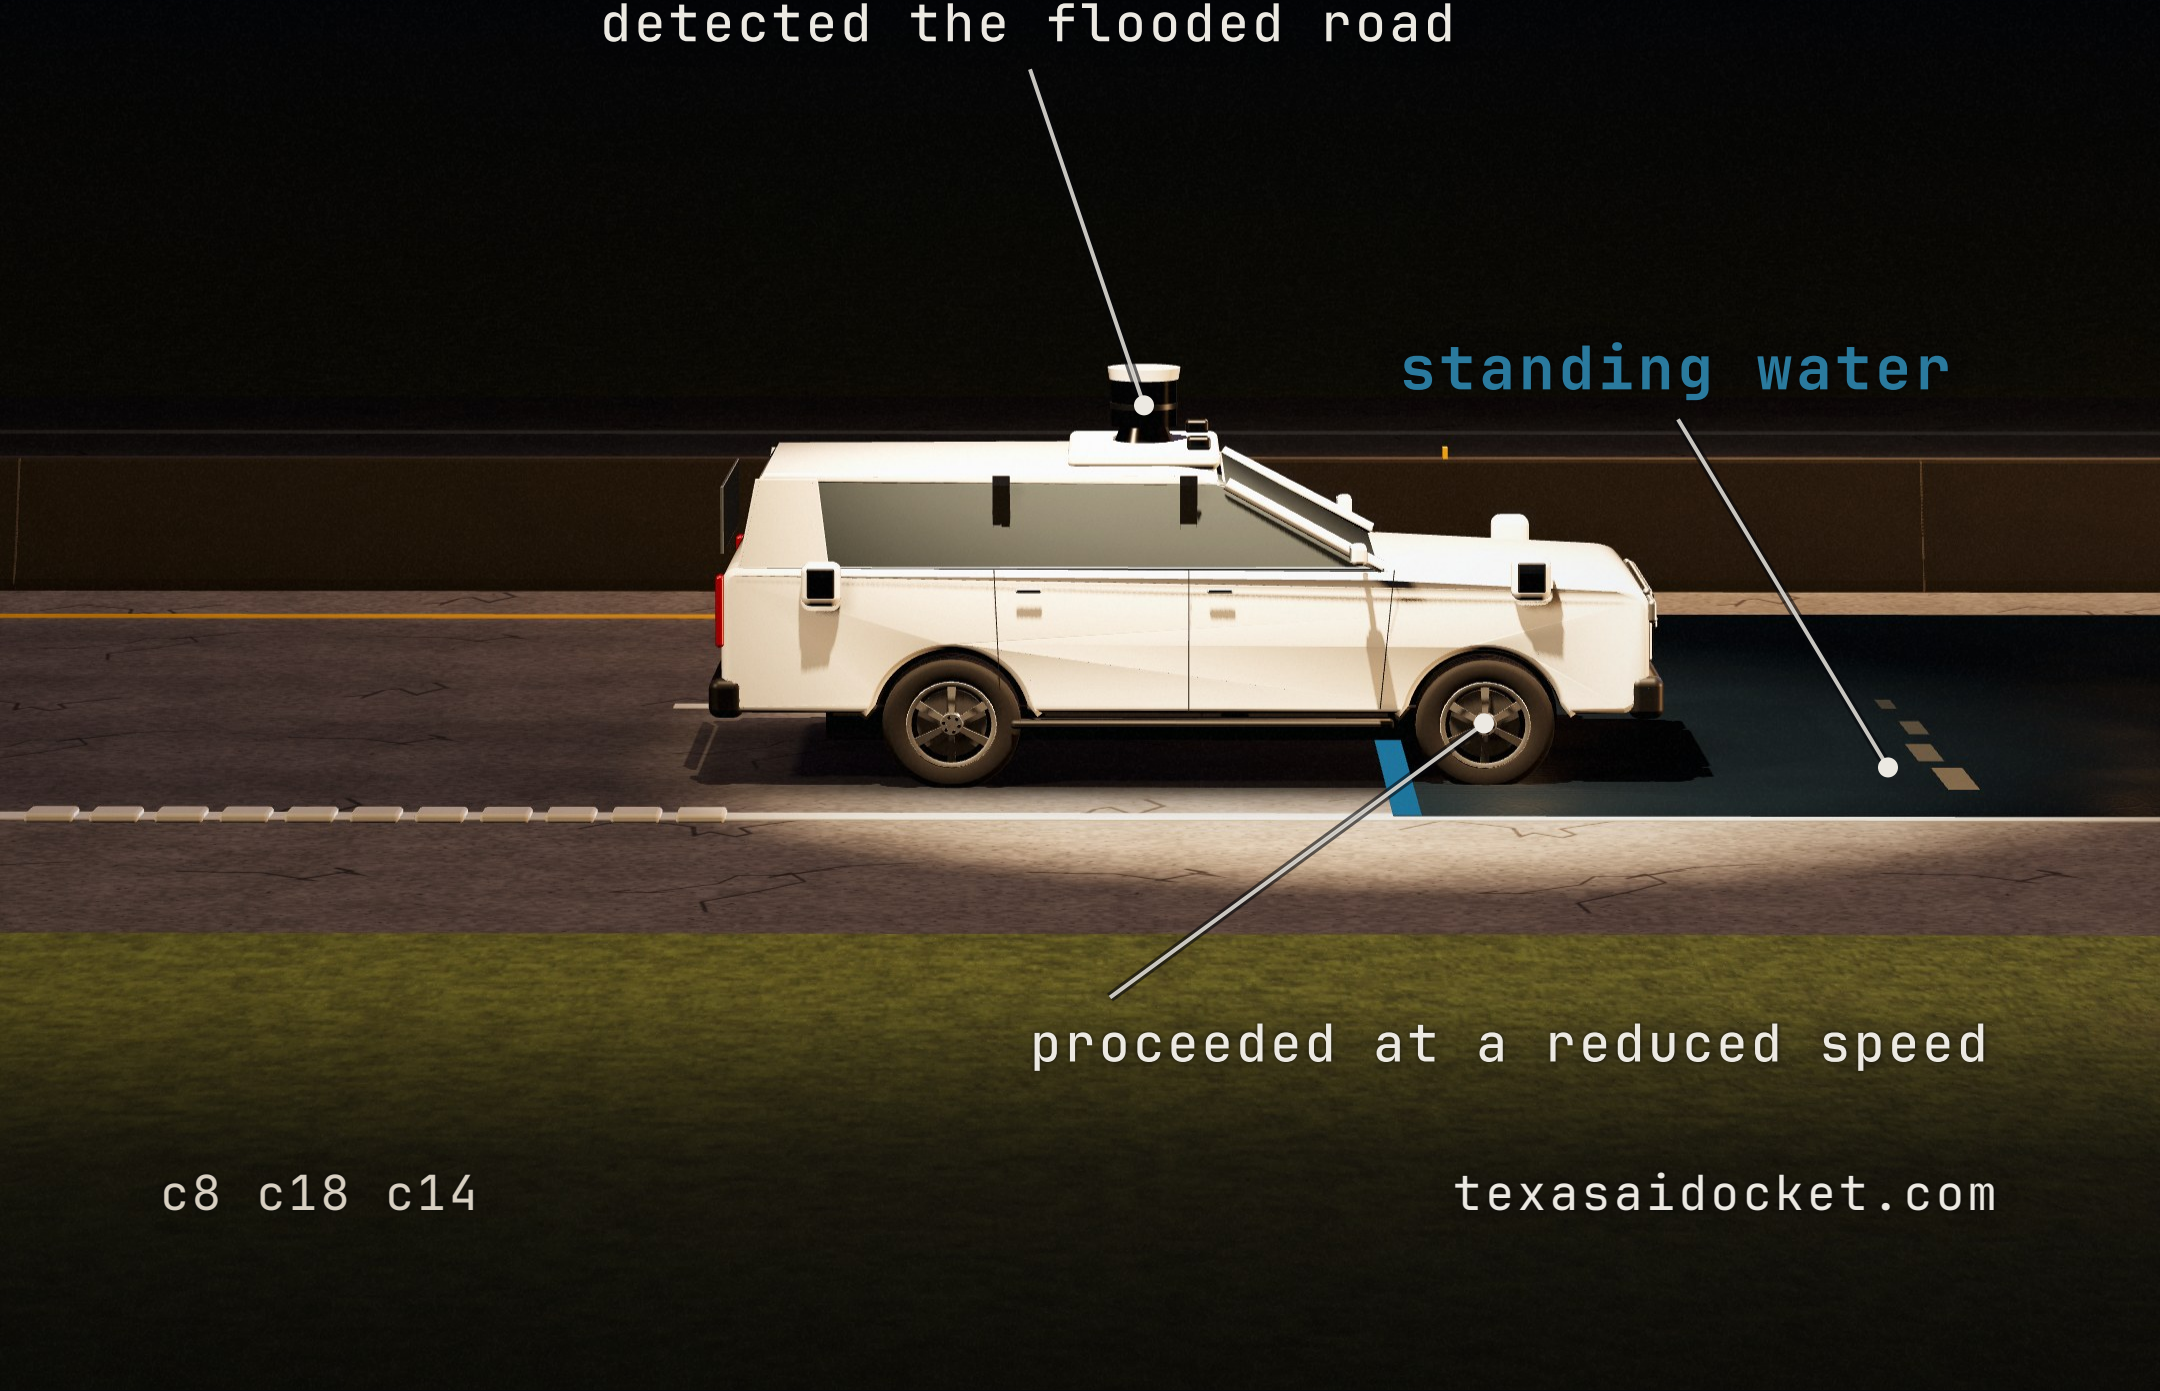

April 20th, Salado Creek

Texas Public Radio reported an empty Waymo was swept up in flood waters and washed into the creek during heavy rain, and that no one was hurt. Earlier that April another was stranded in floodwater near McCullough Avenue and Contour Drive. Drawn to illustrate.

It slowed. Then it drove in

The recall record says the software may let the vehicle slow and then drive into standing water on higher speed roadways. Texas Public Radio reports the notice said it detected the flooded road and kept going. The report reached regulators 11 days after the creek.

3,791 of them

The recall covers 5th and 6th generation automated driving systems, 3,791 potentially affected units by the federal record’s count. The lot drawn here holds one for each, most of them out of frame. Drawn to illustrate.

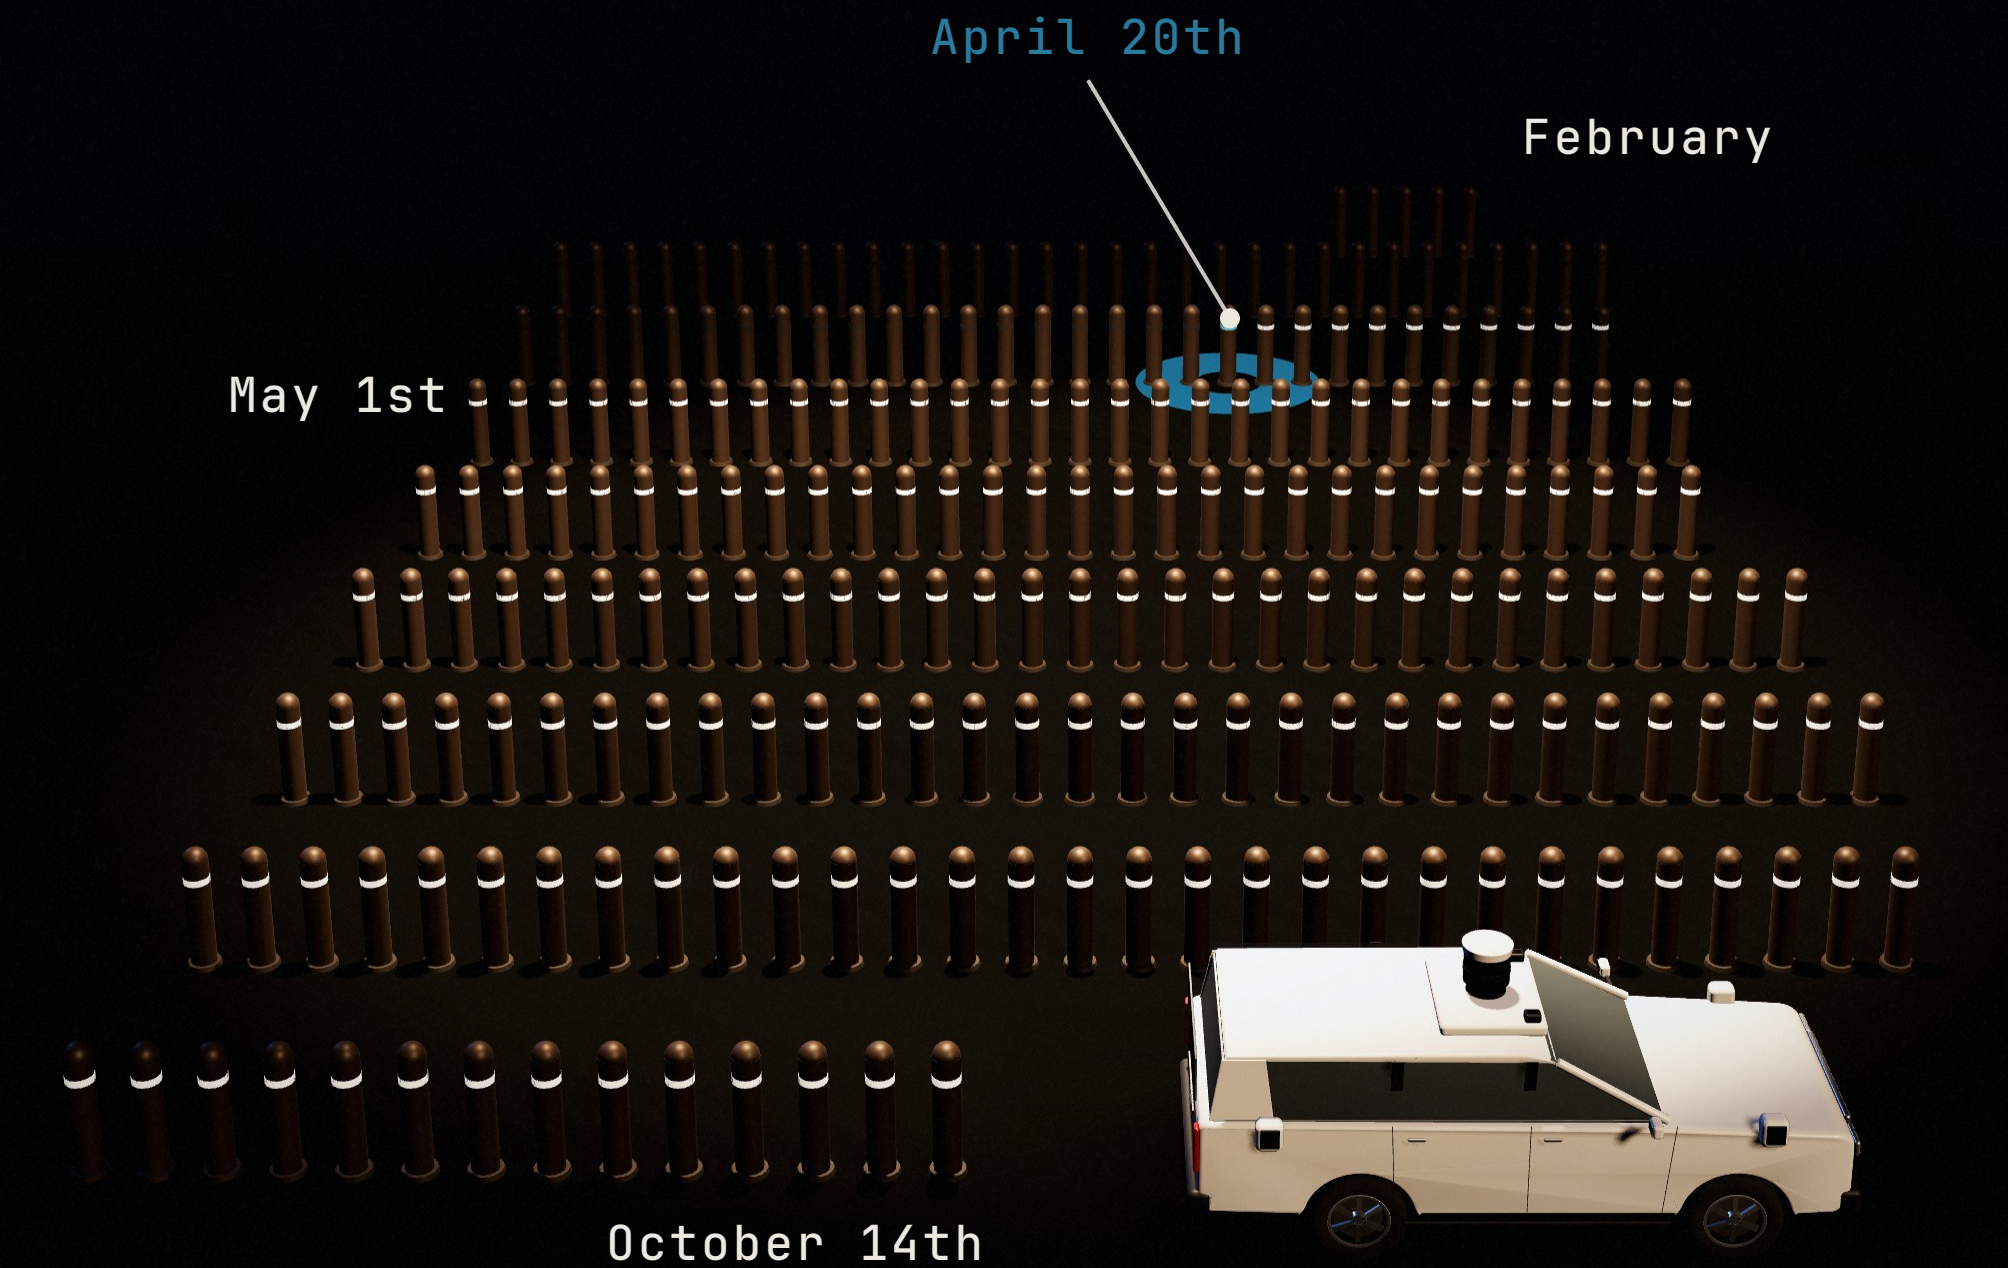

The cars ran without riders

Texas Public Radio called the flood pause Waymo’s longest in San Antonio to date. On May 10th it reported service was expected to resume that week. On May 13th it reported the cars were running without riders. Drawn to illustrate.

177 days from the creek to the curb

One post for each day from February 24th to October 14th, a row for each month. The blue ring is April 20th. The posts lit after it count the days until the service opened to everyone with the app.

"The remedy is currently under development"

That is the federal recall record's remedy field as read on October 16th. In the meantime Waymo tightened its weather limits and updated its maps. Every affected vehicle had that interim update by April 20th.

Anyone can ride. Anyone can read the remedy field

The city’s airports director called the rides a new option to get there. NHTSA’s recall record for Waymo LLC is public, and its remedy field still reads under development. Drawn to illustrate.
