

The tax break came first

Saronic broke ground on Port Alpha, a shipyard for autonomous and manned ships, at the Port of Brownsville on September 30th. The Tribune reported the county approved its tax break in June, before Saronic had picked the port. The vessel is drawn to illustrate.

An autonomous boat made a rescue, Saronic says

Its home page claims the first known at-sea rescue by an autonomous boat. The deckhouse and mast are drawn to illustrate, not Saronic's design.

What Saronic says its Marauder does

These are Saronic’s figures for its Marauder. The release names Navy landing craft for the yard’s first phase. The hull and the block are drawn to illustrate.

TOP SPEED 25+ KNOTS

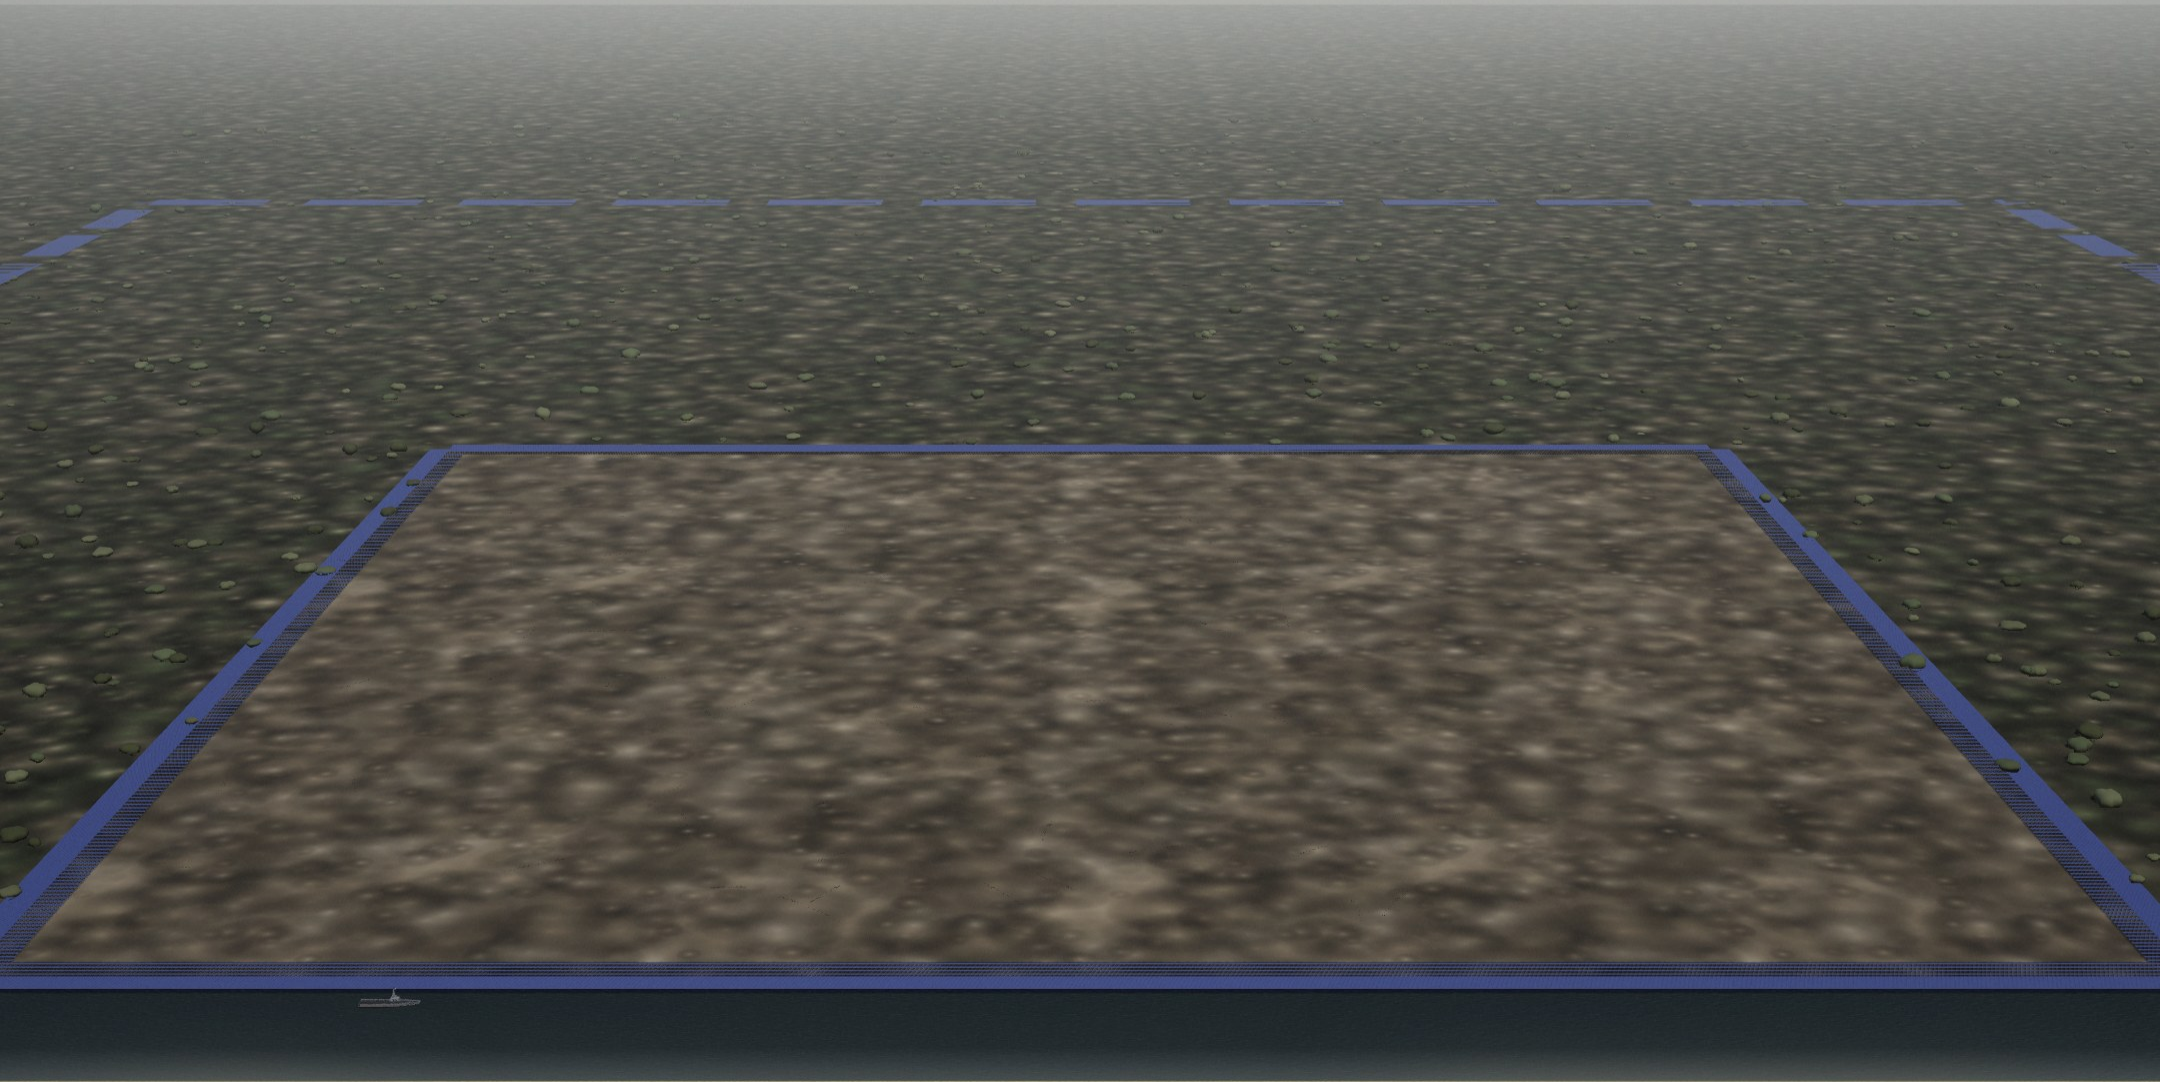

RANGE UP TO
5,400 NAUTICAL MILES

PAYLOAD 150 METRIC TONS,
DRAWN AS ONE STEEL BLOCK

835 acres, and an option on more

Port Alpha sits on 835 acres, with an option to expand to nearly 4,400, Saronic says. Each is drawn as a square of that area, not the site’s real shape.

Room for ships up to 850 feet

Saronic says the yard will first build vessels up to 850 feet. An expansion could support vessels over 1,200 feet. The blocks run 850 feet and the hull is drawn to illustrate.

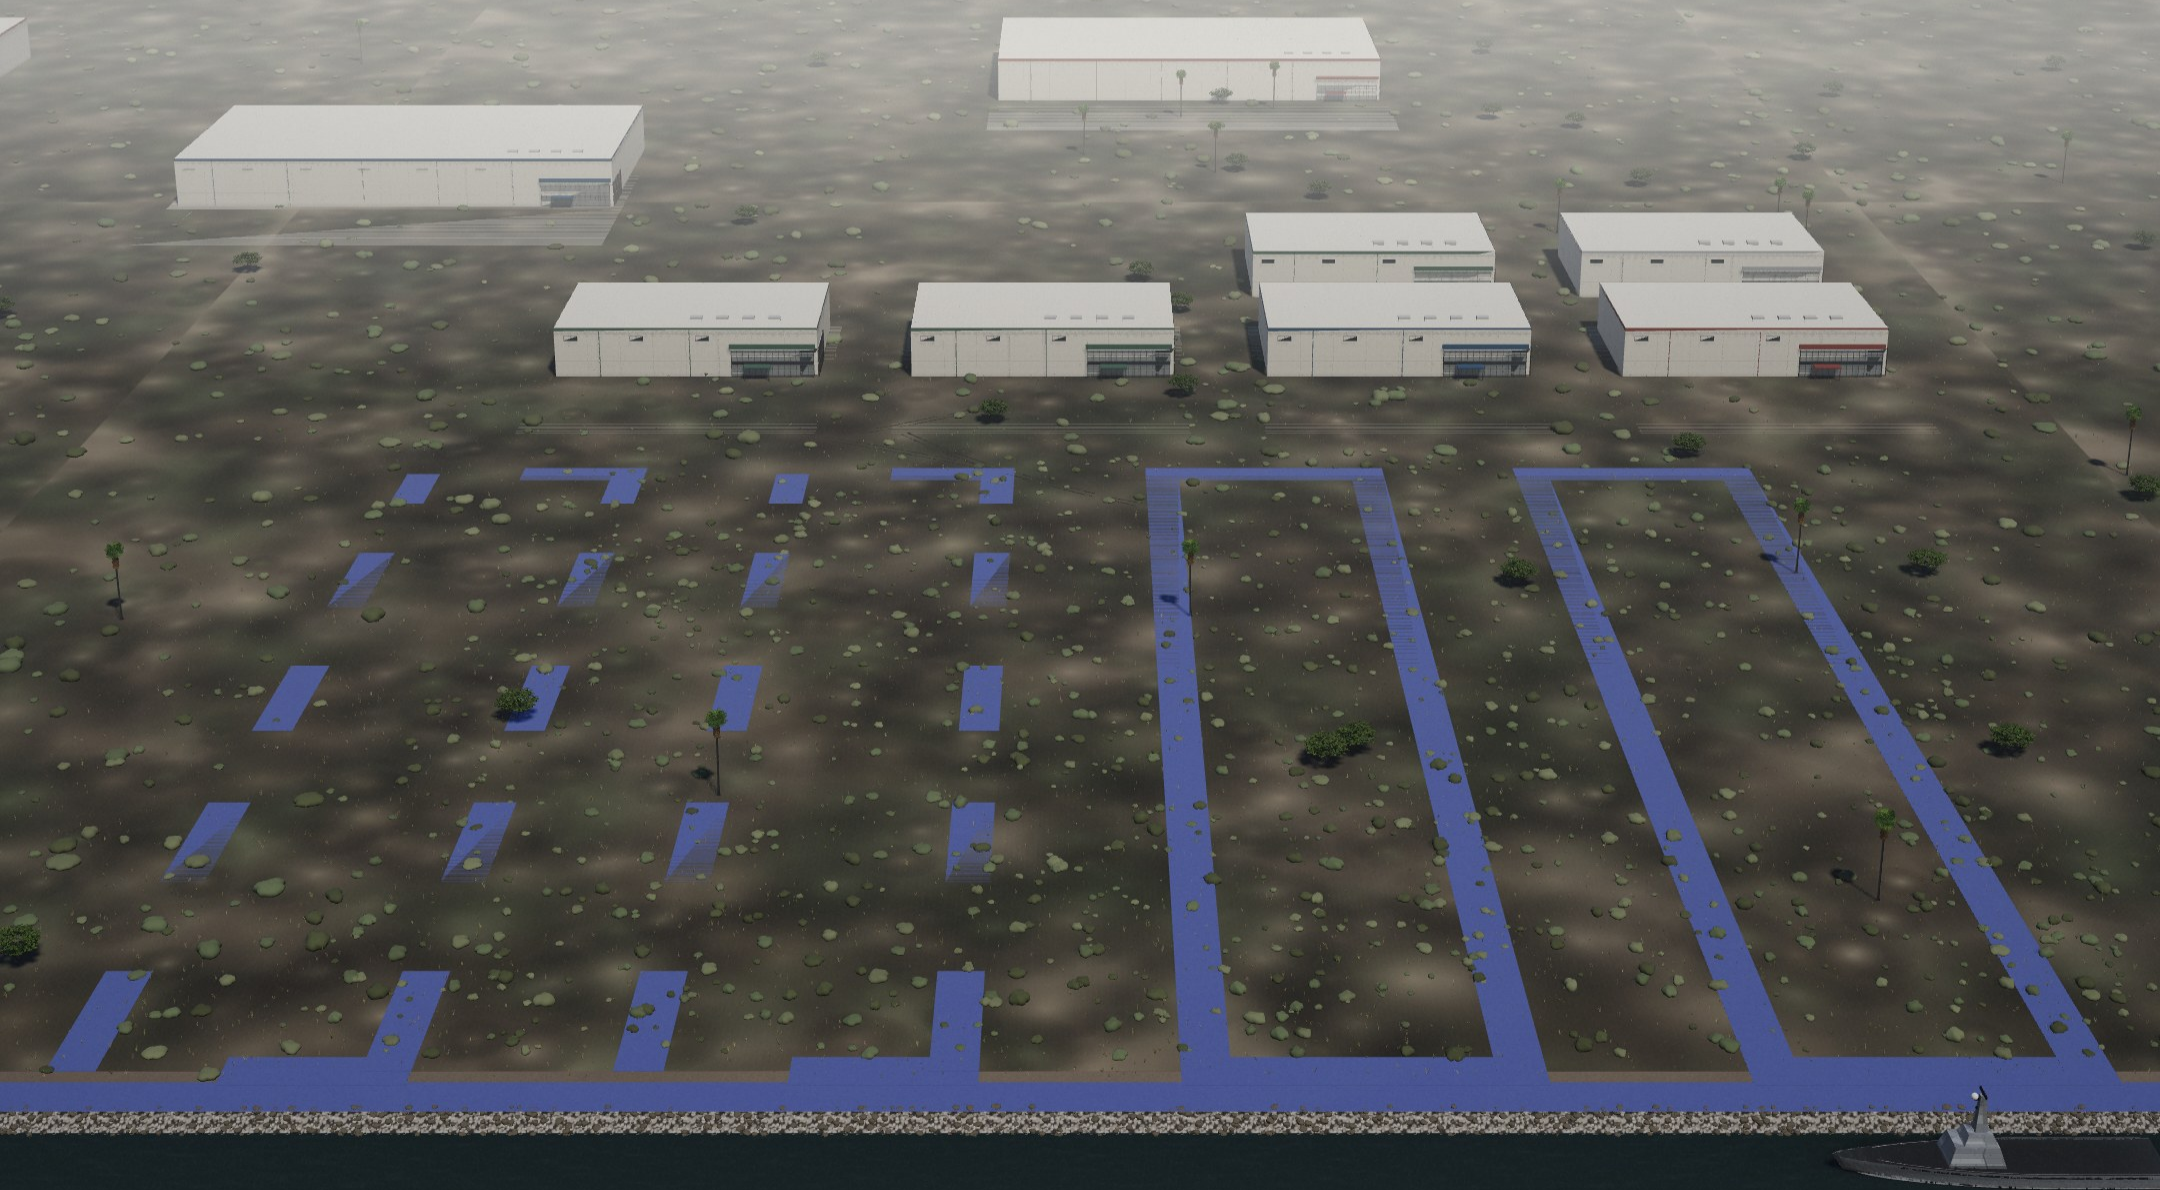

The county voted before a site was chosen

The Texas Tribune reported on June 18th that the court approved a \$211 million tax break for Saronic, a 95% abatement over 20 years. Saronic said then it had not chosen a site.

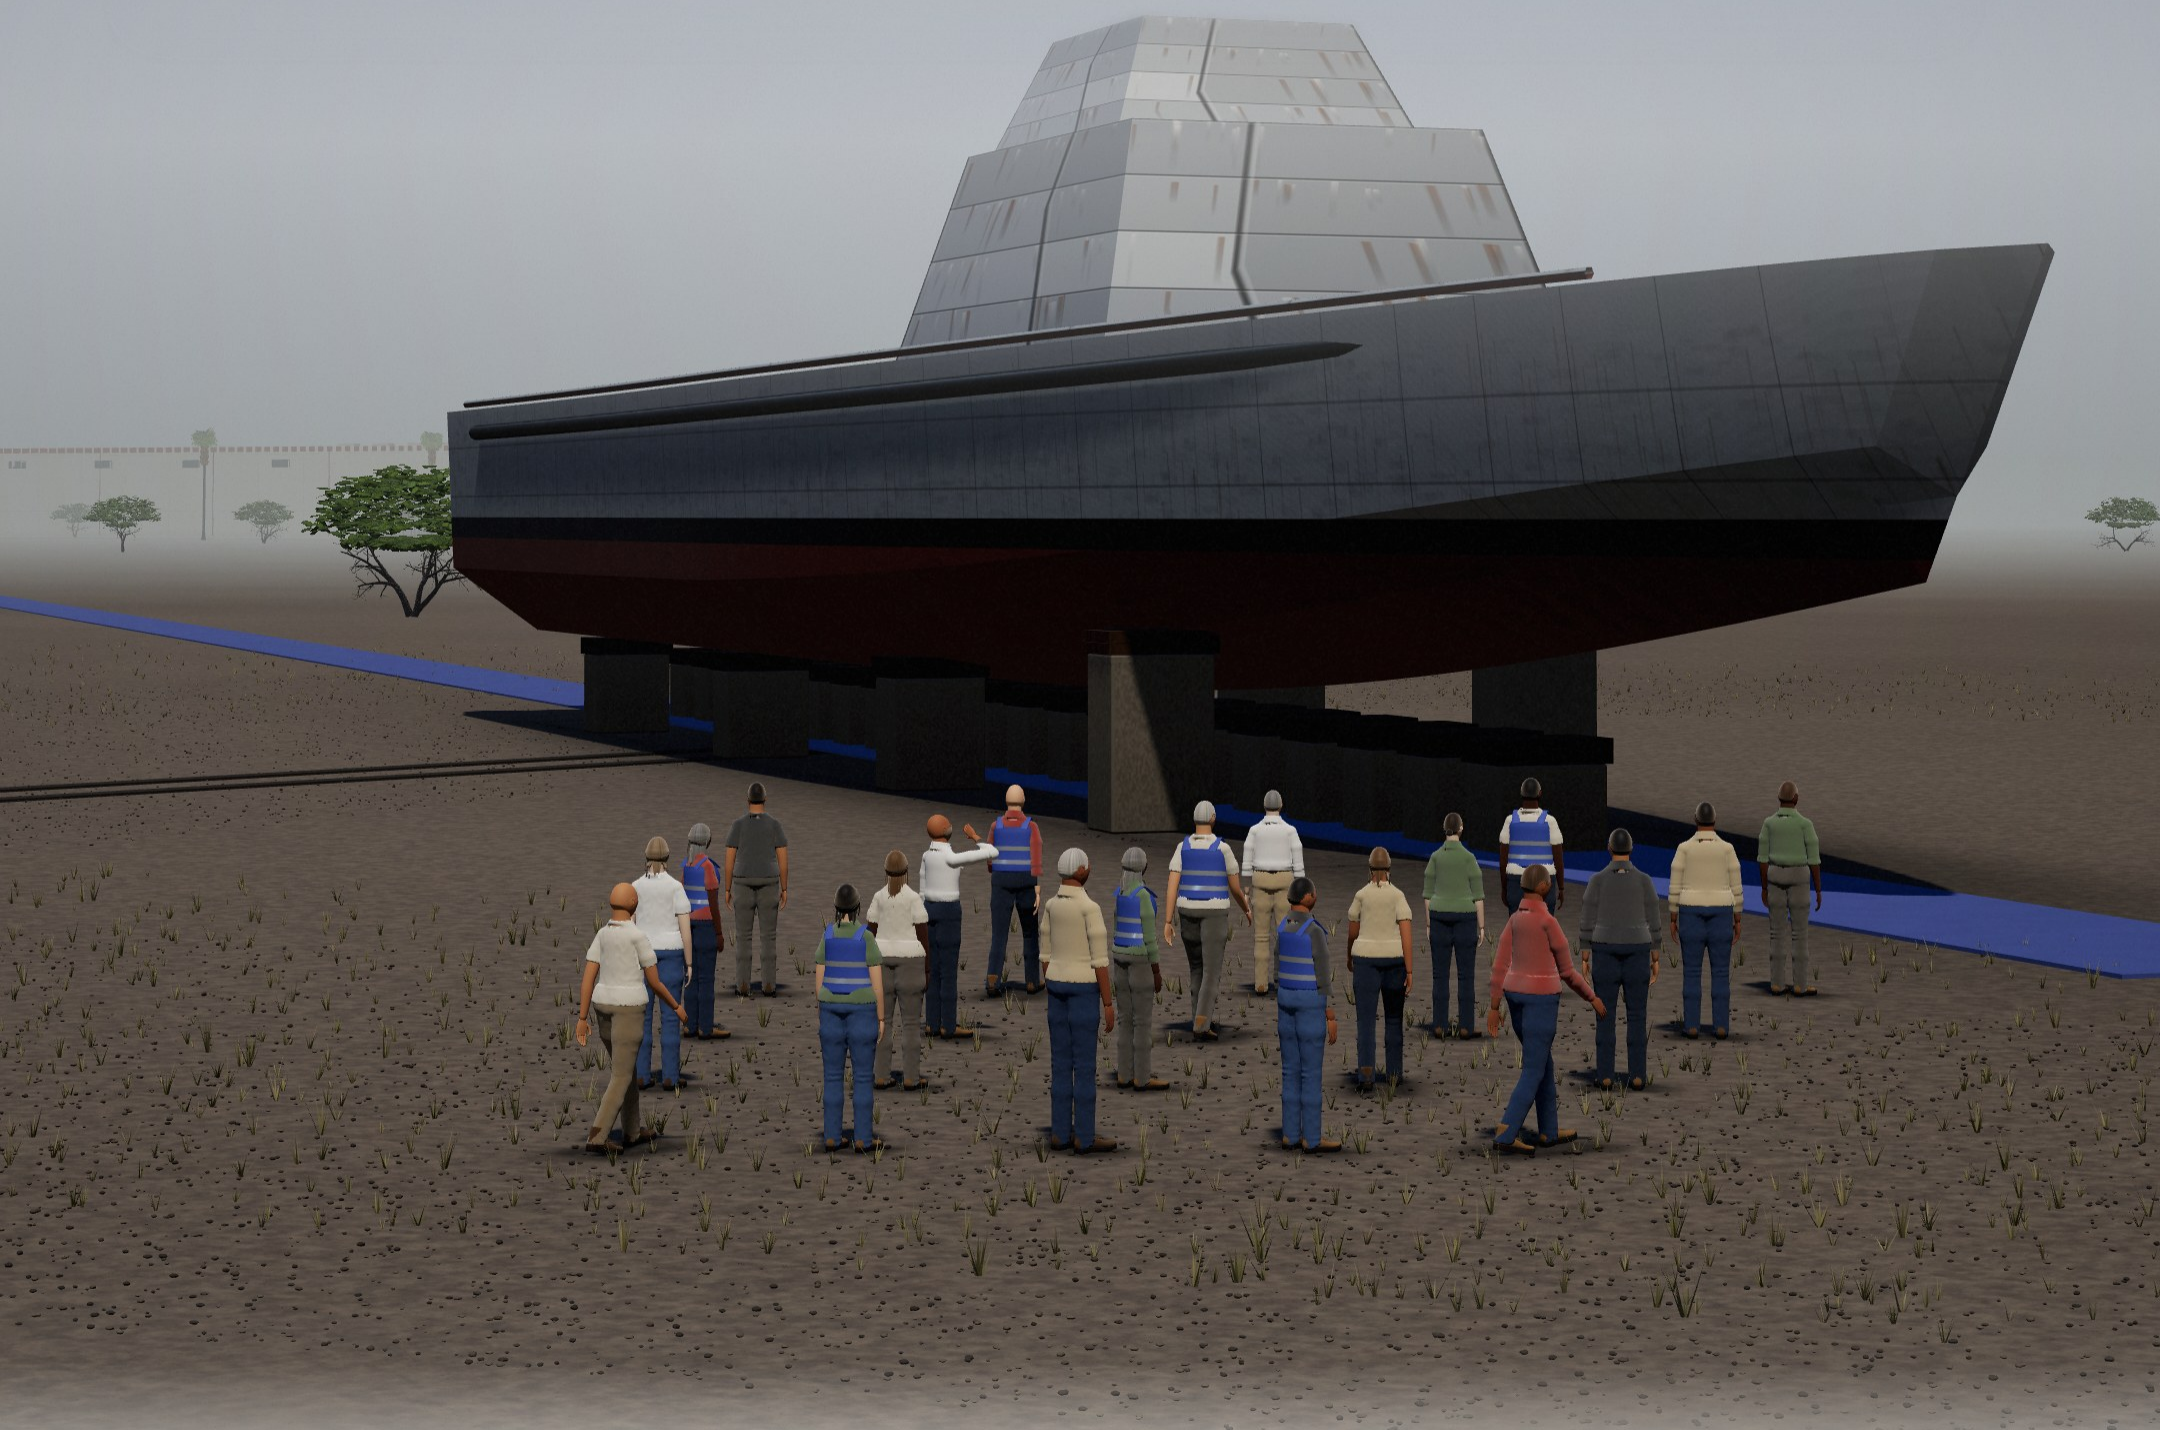

More than 2,500 feet of quay, planned

Saronic says two to four build positions will handle final ship erection, beside 8 to 10 production buildings. The quay is drawn to its length, the rest to illustrate.

Up to 10,000 jobs, Saronic says

The Tribune reported the break would require 35% of the full-time workforce to be local. Seven of the twenty drawn here wear the local share.

The break would shrink if jobs fall short

The Tribune reported the condition, and that opponents told the court the break would take money from public schools. The line runs 850 feet, the longest Saronic says the yard can build at first.
