Over $19 million for a cluster not built yet

The state's chip fund will help Texas Tech set up a computing cluster in Lubbock, the university said on November 13th. One wafer stands for $1 million. The boat is drawn to illustrate and has no far end.

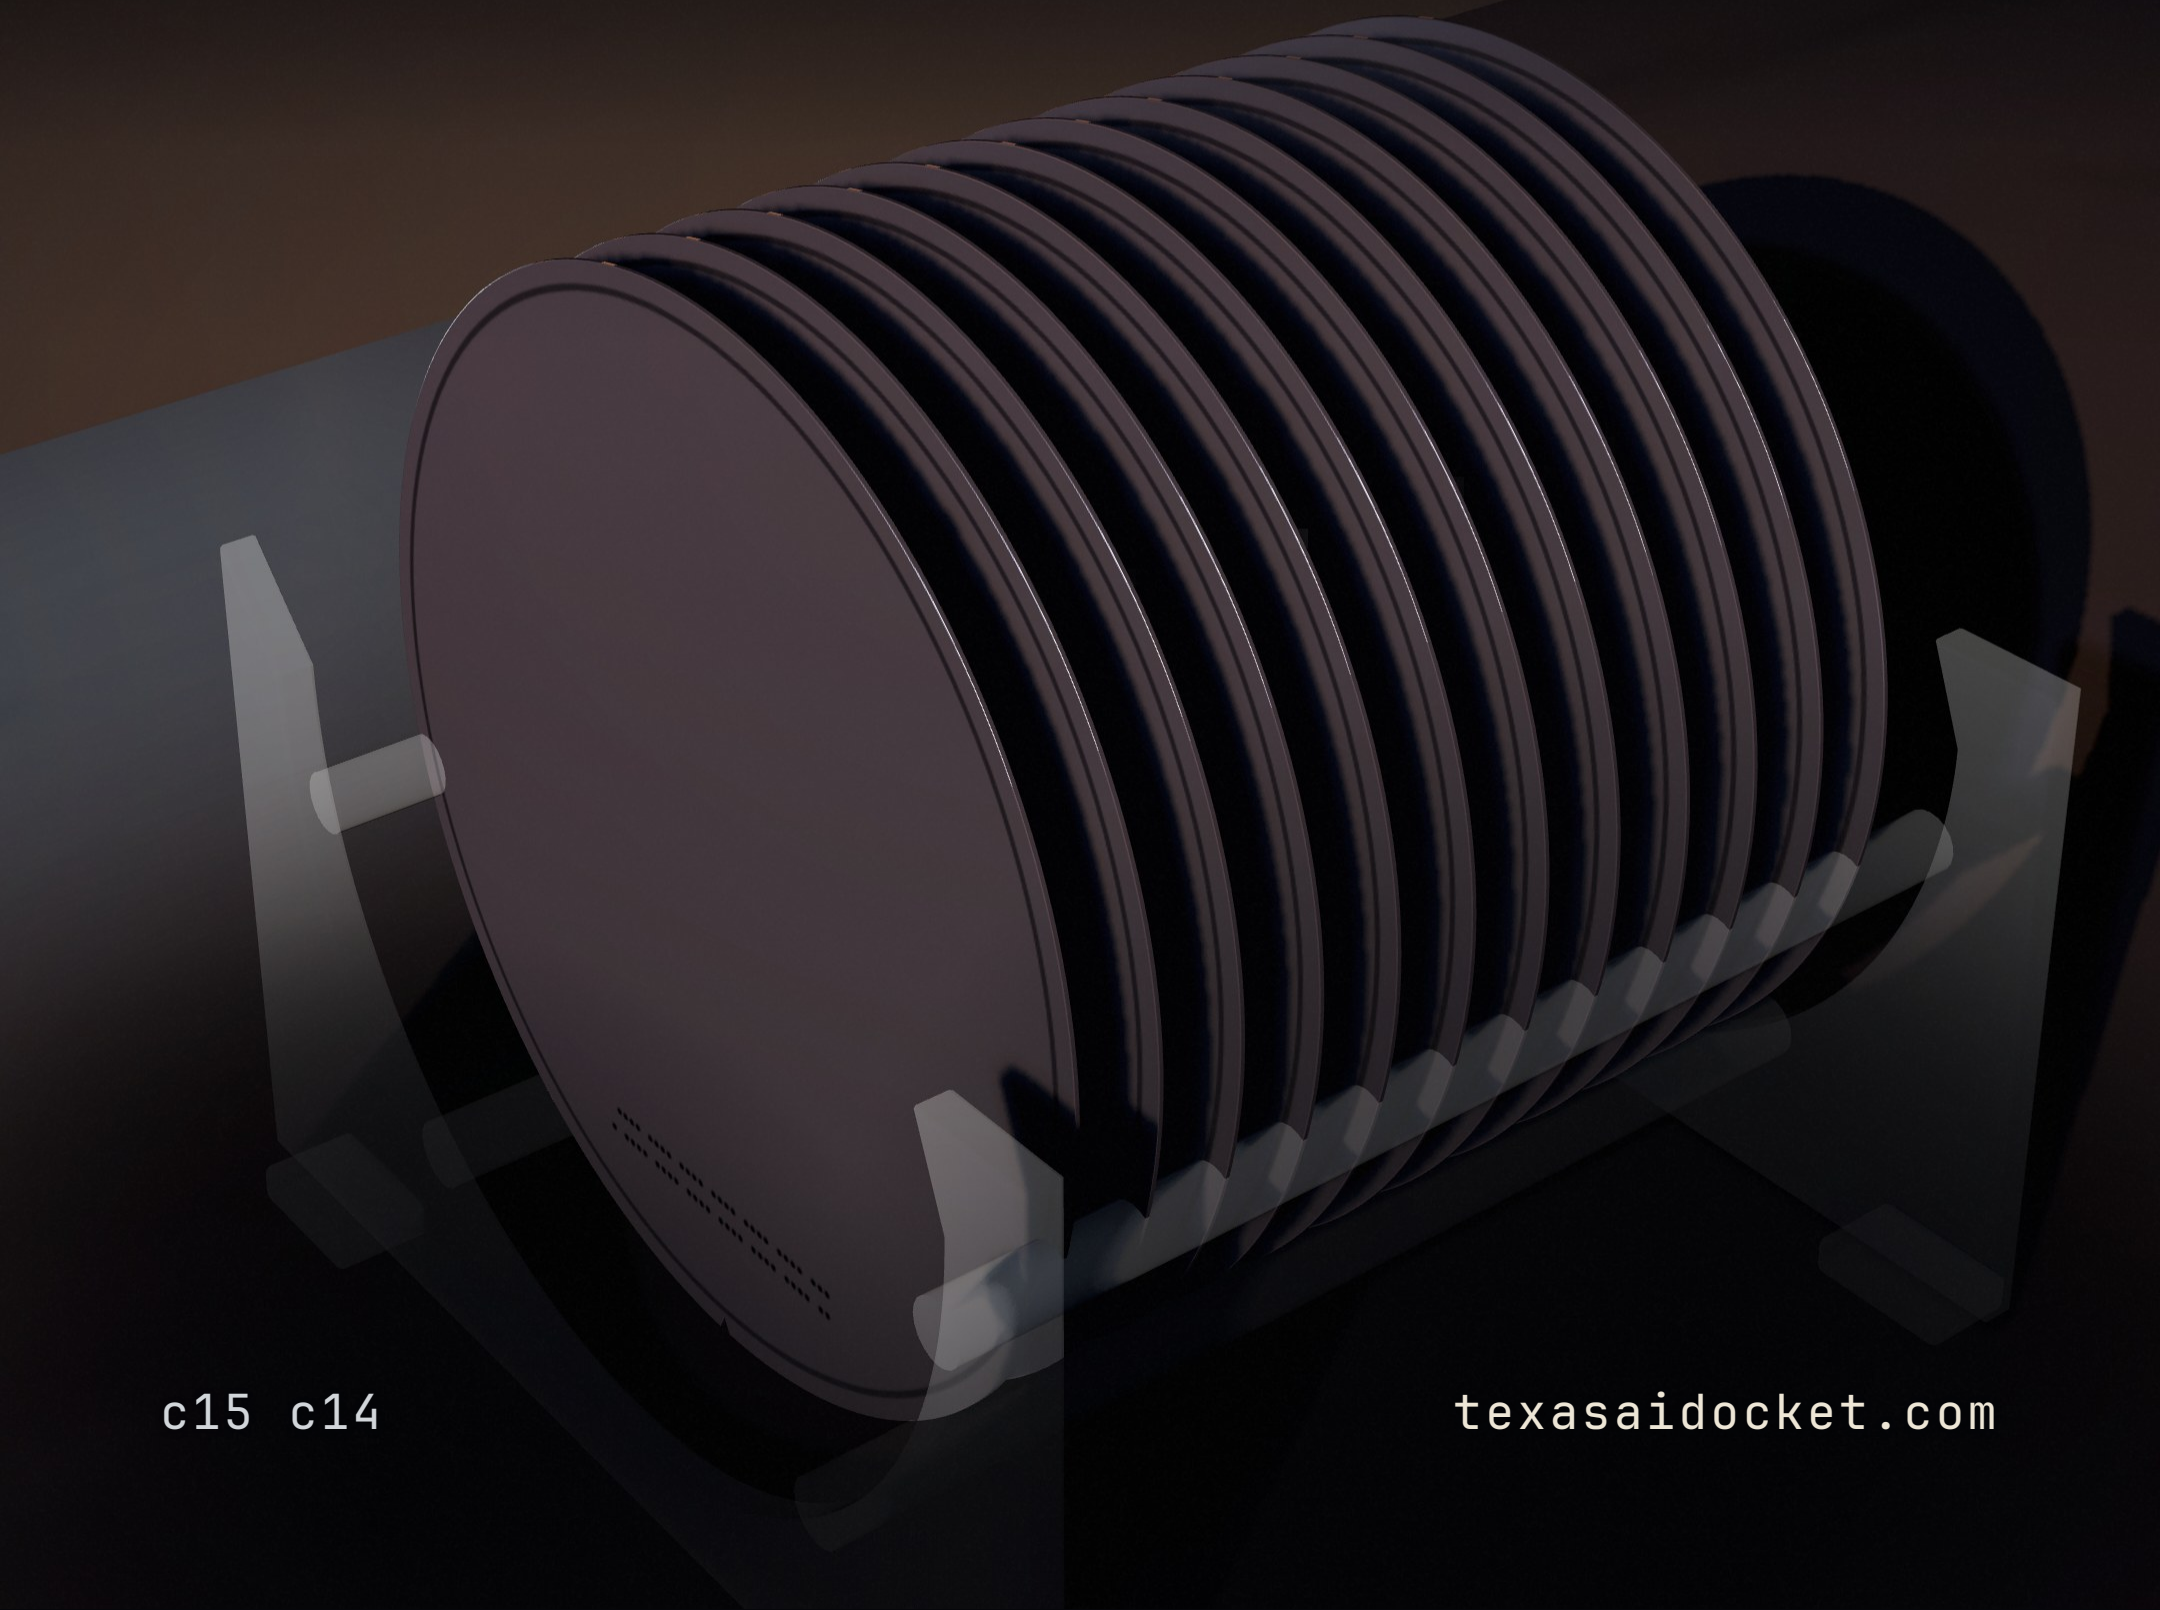

Lubbock, by way of the governor's office

The Texas Semiconductor Innovation Fund is administered by the Texas CHIPS Office in the Office of the Governor. The Texas CHIPS Act created it in 2023. The new cluster is to stand in Lubbock.

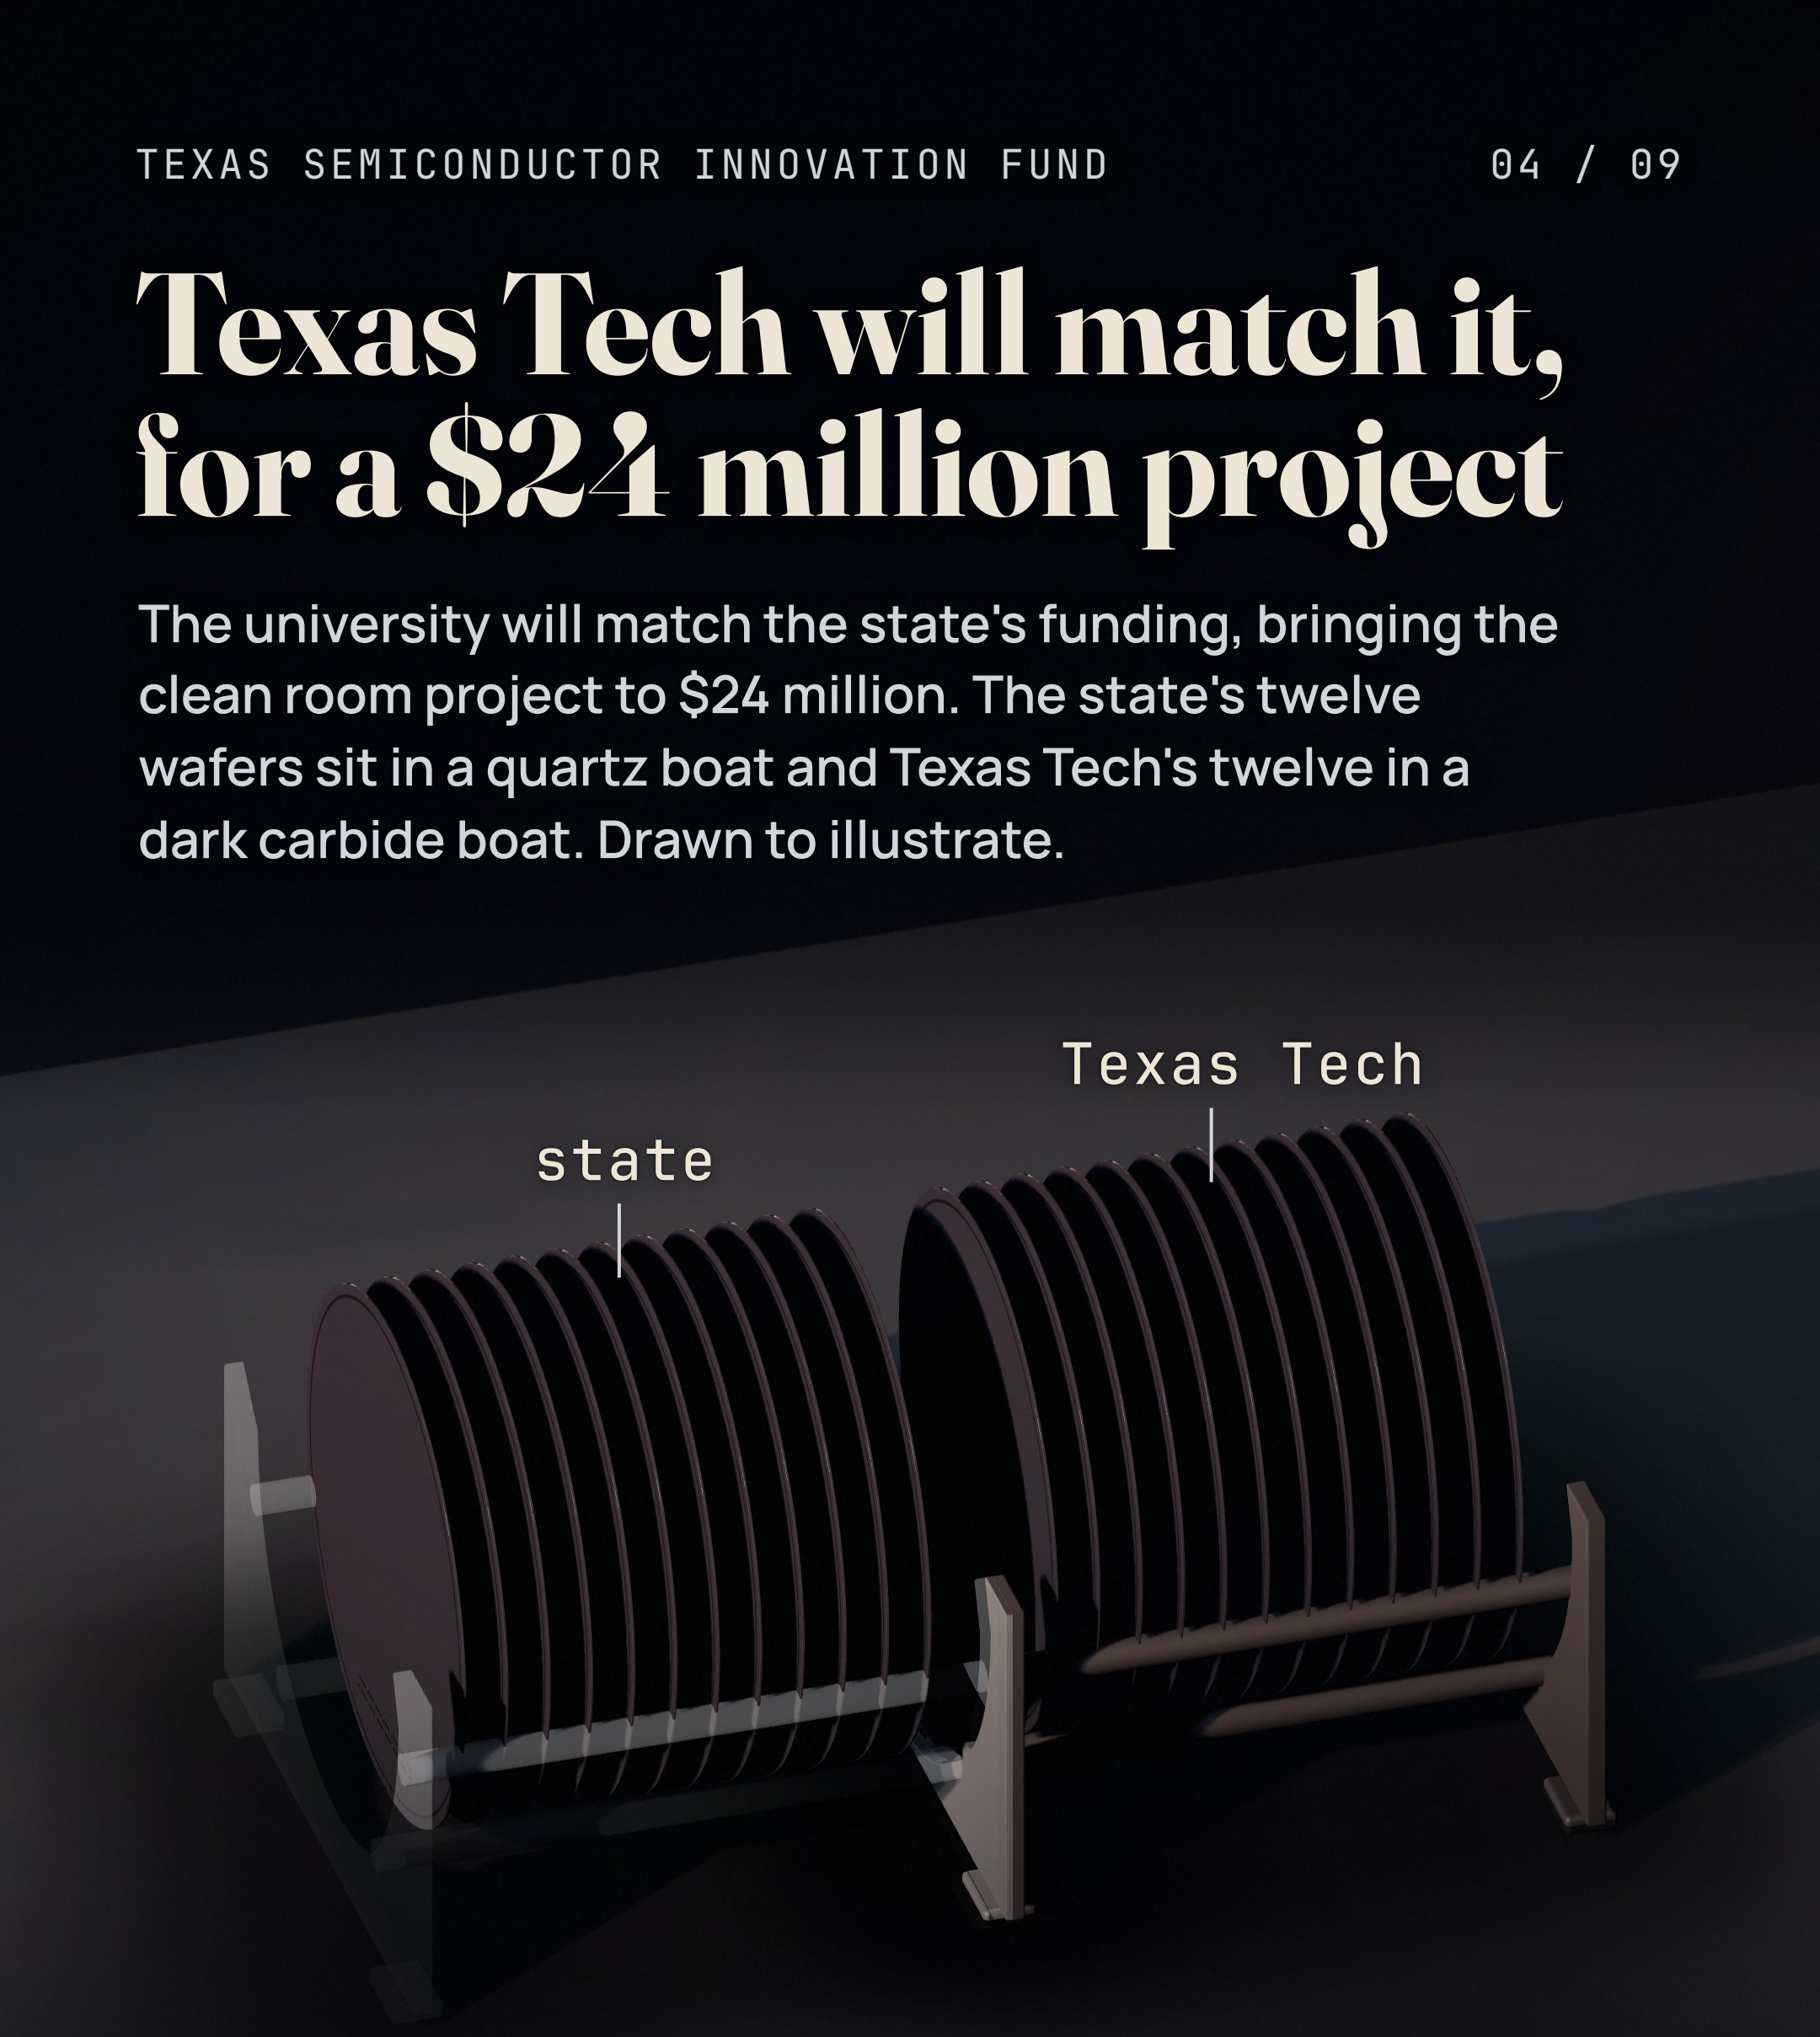

January brought $12 million for a clean room

The fund gave Texas Tech $12 million in January toward a clean room for semiconductor work. Twelve wafers, capped at both ends, drawn to illustrate.

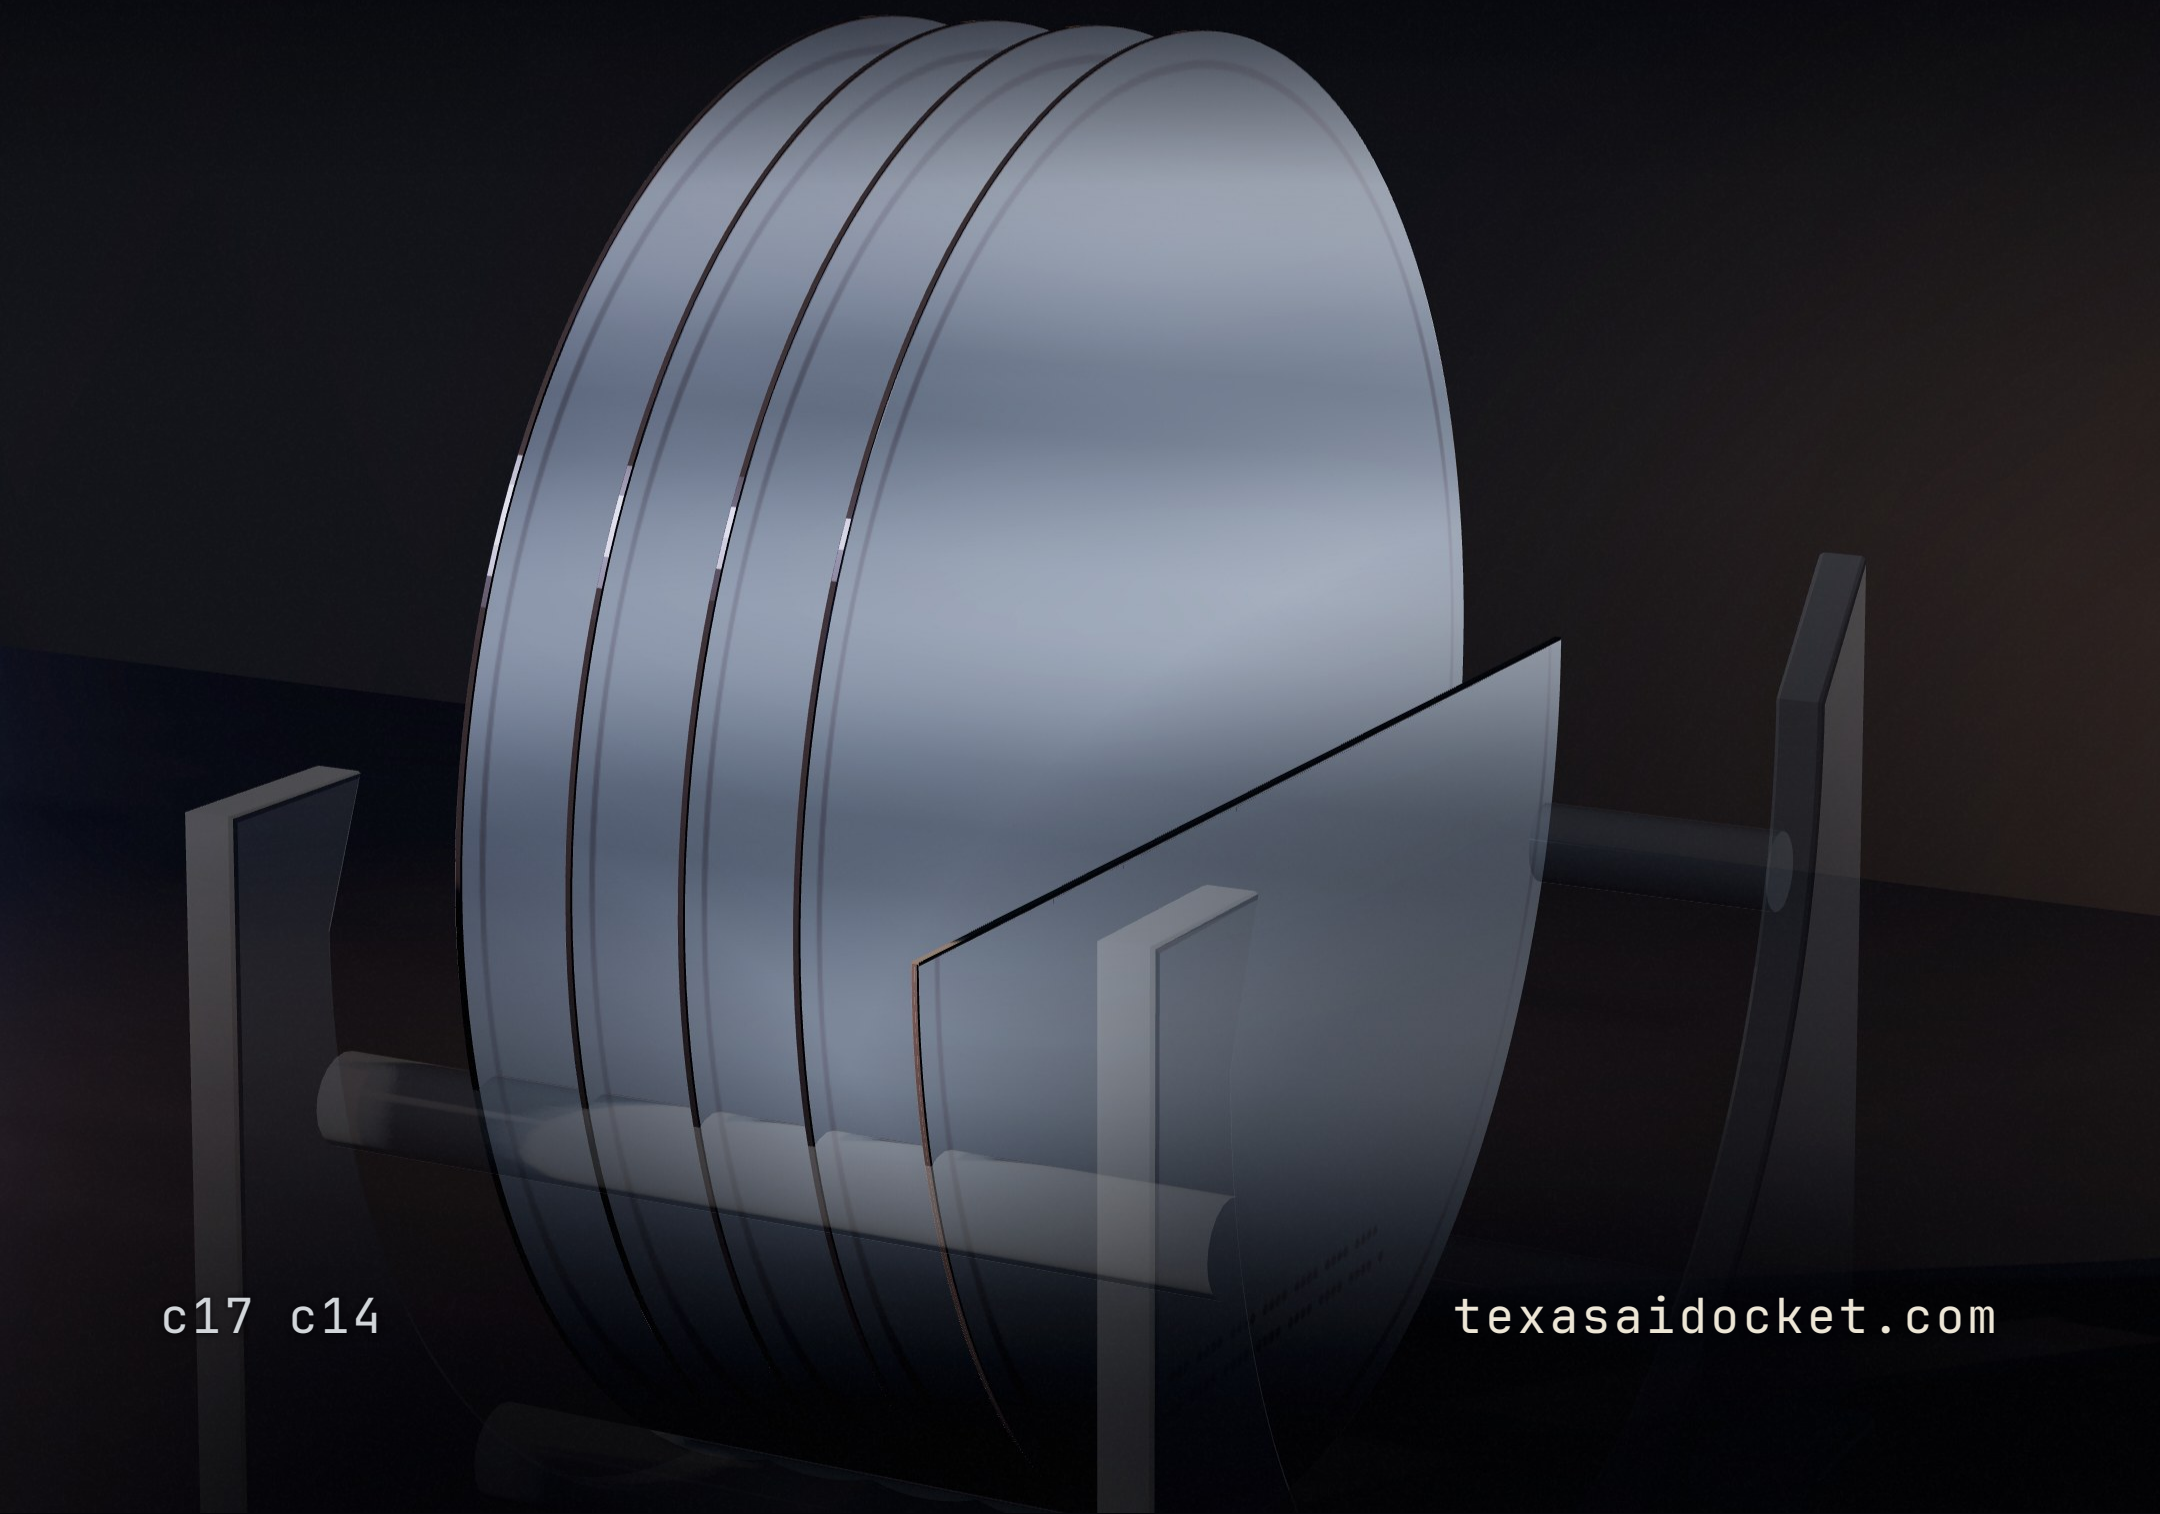

Texas Tech will match it, for a $24 million project

The university will match the state's funding, bringing the clean room project to $24 million. The state's twelve wafers sit in a quartz boat and Texas Tech's twelve in a dark carbide boat. Drawn to illustrate.

May added roughly $4.5 million

In May a Texas Tech engineering team received roughly $4.5 million from the fund for wide and ultrawide bandgap semiconductor research. Four wafers and a cleaved half, drawn to illustrate.

Three awards, three kinds of number

January was a stated $12 million. May was roughly $4.5 million. November is over $19 million, which is a floor. No total is drawn.

AI to steer how the crystals grow

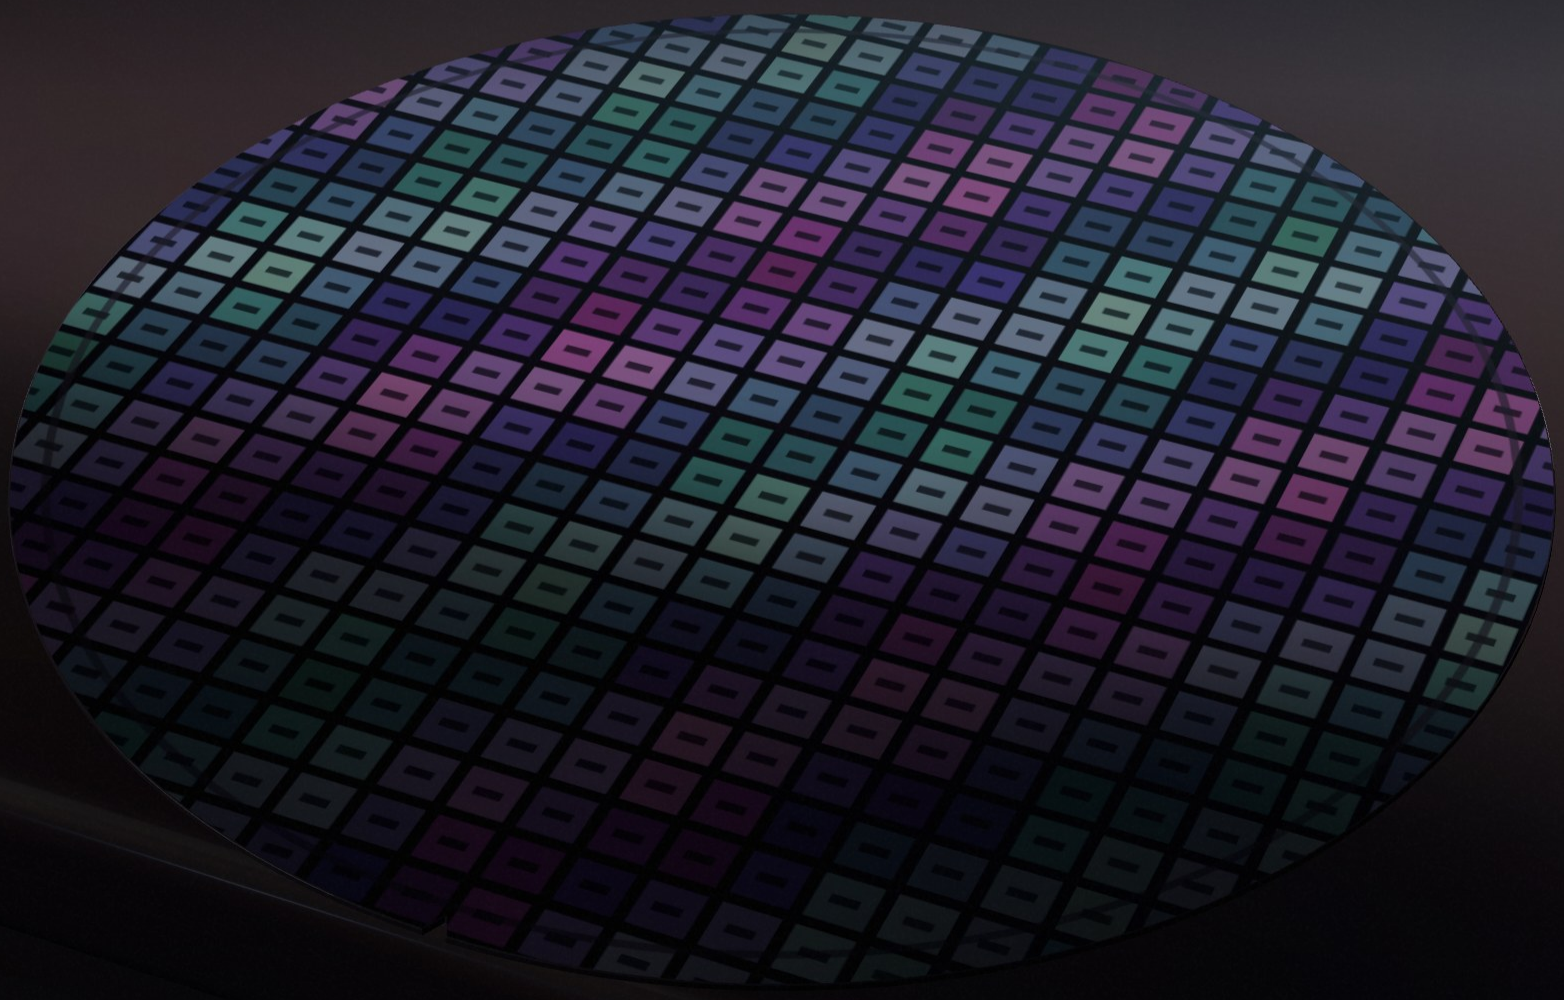

The project will integrate AI with high-fidelity simulation data and experimental results, which the university says should shorten development cycles. Planned work includes AI-enabled epitaxial growth of ultrawide-bandgap semiconductors. Drawn to illustrate.

The newest Nvidia chips, the dean says

The engineering dean, Roland Faller, says Texas Tech will be one of the first universities with access to the newest generation of Nvidia chips to power the cluster. The university describes a cluster as servers working as one system. Drawn to illustrate.

No install date announced

Texas Tech's November 13th announcement says the award will help establish the cluster. It gives no install or completion date. The plate is drawn to illustrate.
