3,164 automated vehicles, 17 names

Since May 28th, a company running automated vehicles commercially in Texas needs a state authorization. A Texas Department of Motor Vehicles report with data as of October 29th lists 17 companies.

Two names hold 74 percent

Waymo lists 1,259 vehicles and Tesla Robotaxi 1,080. That 74 percent leaves 825 vehicles to the other 15 companies. One car here stands for ten listed vehicles.

Fifteen companies share 825

Avride lists 344. Then 14 companies list fewer than 100 vehicles each, down to International Transport Eng at 7. One car stands for ten listed vehicles, and a white bar marks where each company ends.

The smallest entry lists 7

International Transport Eng lists 7 vehicles. On the lot it is one car, alone in a row built for ten. Bot Auto and Waabi list 13 each, MOIA and PlusAI 12 each.

No fee, and no expiry

Commercial operation has needed an authorization since May 28th, 154 days before the report's data date. It carries no fee and stays valid until the department revokes it.

MAY 28TH OCTOBER 29TH

Dallas asked for crash history

In comments on the rules, the City of Dallas asked the department to require crash history and to make information about approved operators public. The department answered that sections 545.453 and 545.456 of the Transportation Code don't allow it to require crash history.

The line is serious bodily injury

The department treats an operation as endangering the public when it has caused serious bodily injury or is likely to. It calls administrative enforcement unlikely below that standard. Traffic laws apply to these vehicles as to any other.

Two releases say a person sits up front

Volvo says its autonomous hauls with Waabi between Dallas and Houston currently run with an observer in the driver's seat. Kodiak and Charger say they run between Dallas and Laredo with a safety driver behind the wheel. Kodiak says its Permian Basin trucks have run with no one in the cab since December 2024.

Where a concern goes

A concern that an automated vehicle could cause serious bodily injury or death can go to the department's Enforcement Division at txmccs.txdmv.gov/truckstop. The department's program page links an authorizations report.
