A 24 machine cell, expected in early 2027

Lockheed Martin says Hadrian will bring a highly automated machining cell to its Grand Prairie missile plant, run by Lockheed’s own workforce.
Drawn to illustrate.

Past 735,000 square feet

Lockheed says it is investing $300 million to grow the operation past 735,000 square feet, with 100,000 of new space and 85,000 of office turned to manufacturing. Each area is drawn as a square at one scale, not the plant's shape.

250,000 parts in 2025

The plant makes components for missiles such as PAC-3 MSE and THAAD. It made 250,000 parts in 2025 and has nearly 800 production employees now. Split evenly and rounded down, that fills this tray, one pocket a part. Drawn to illustrate.

More than 30 machines, already

The company says it turned former office space into manufacturing areas and installed more than 30 high precision machines in a few months. These are Lockheed’s own, not Hadrian’s cell. Drawn to illustrate.

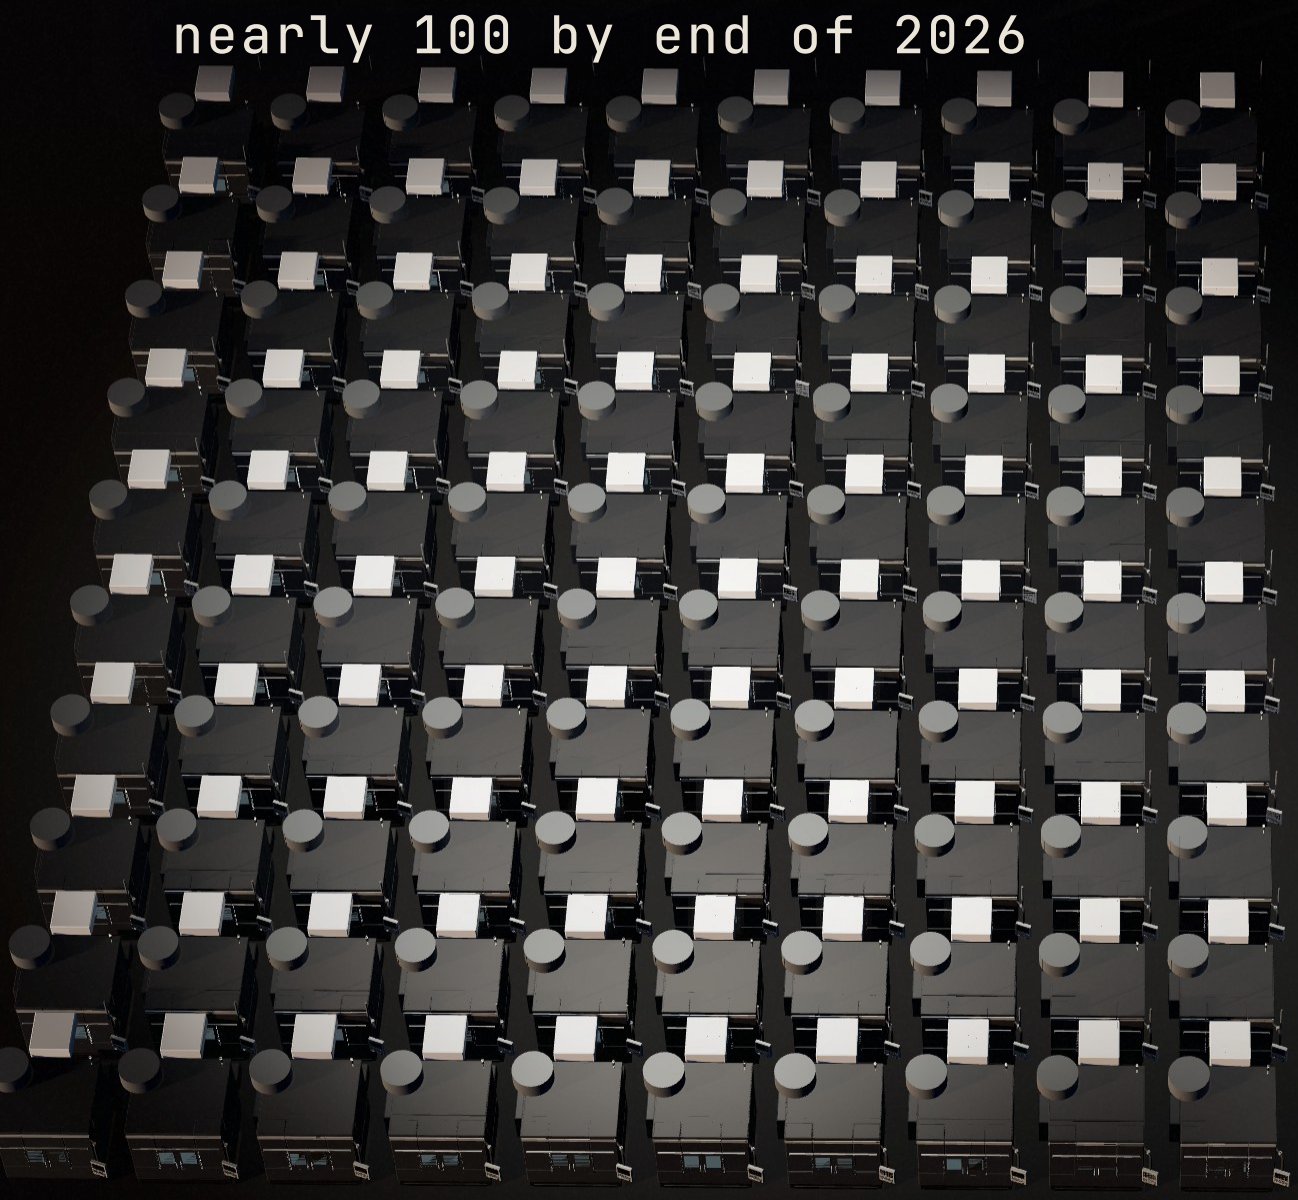

Nearly 100 new machines

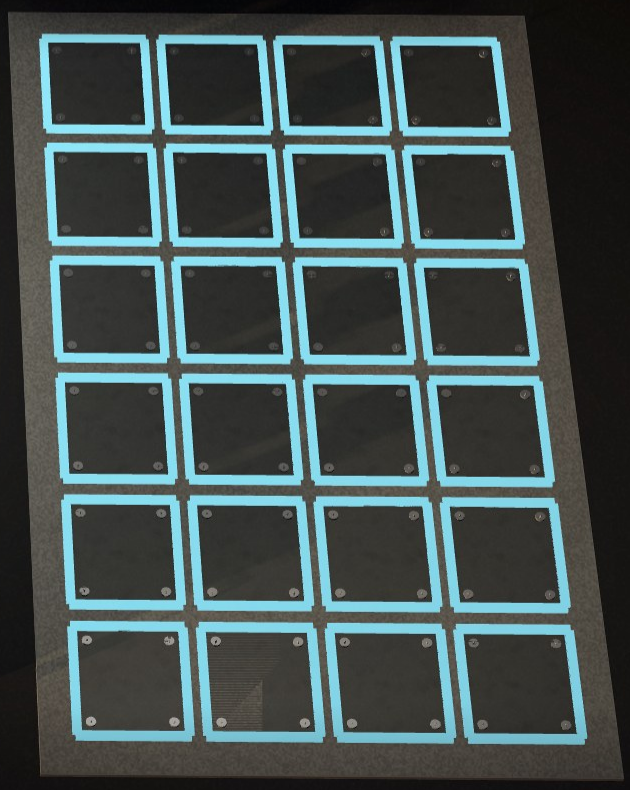

Lockheed expects to have added nearly 100 new advanced machines across the facility by the end of 2026. The block draws 100, at one scale.
Drawn to illustrate.

24 machines, expected in early 2027

The release doesn’t say whether Hadrian’s 24 count toward the nearly 100, so they are drawn apart, as empty bays. Drawn to illustrate.

Software it calls AI powered

Hadrian says this of the software in its own factories. Its home page also offers manufacturing cells deployed at customer sites. Drawn to illustrate.

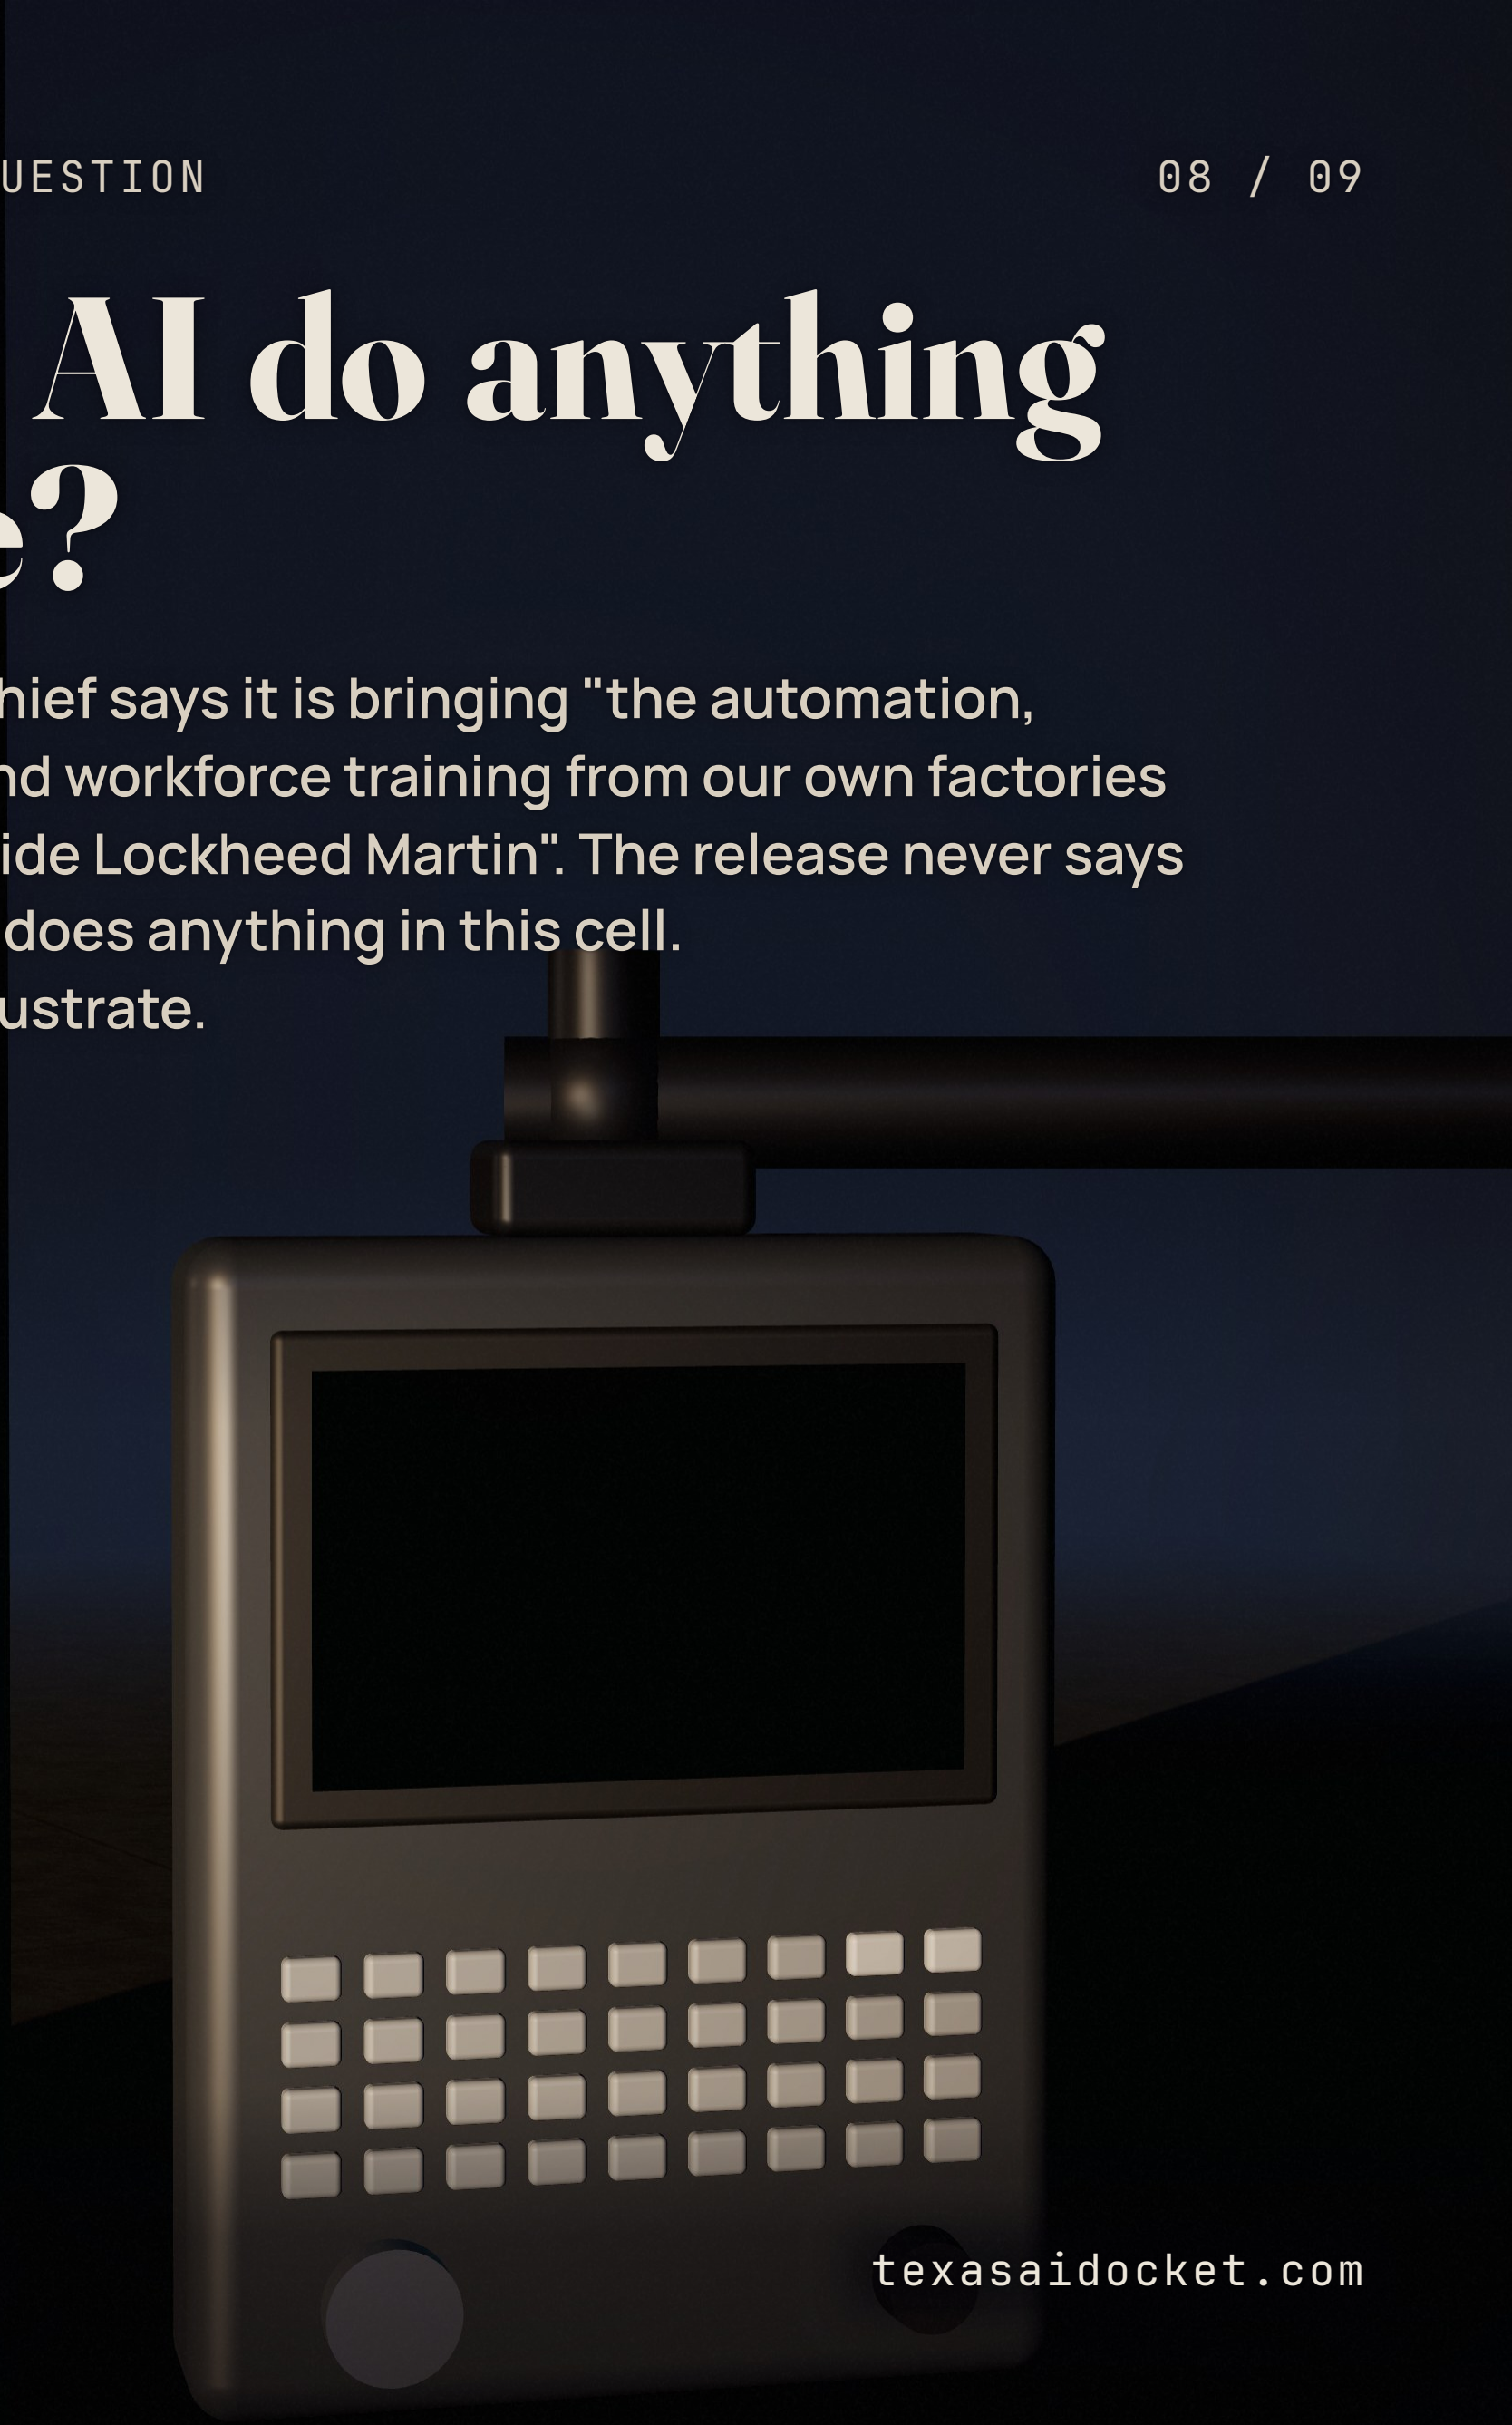

"Opus interprets legacy designs and automates manufacturing and inspection"

Hadrian's home page

Will AI do anything here?

Hadrian’s chief says it is bringing "the automation, software and workforce training from our own factories directly inside Lockheed Martin". The release never says whether AI does anything in this cell.
Drawn to illustrate.

Lockheed's own crews will run it

The cell is expected to be operational in early 2027 and run by Lockheed’s production workforce. The release’s 2,000 Texas jobs are the company’s own figure, statewide. Drawn to illustrate.
